"To stimulate interest in the subject, indicate where exact knowledge is lacking and the directions where it may be sought, and to lay down lines of prevention are objects I have had in mind in writing this book. Some of the views advanced are not in accord with those accepted in the textbooks, but during the past fifteen years I have devoted much time to the investigation of the complex problems discussed and no current view is rejected and no new one advanced without the scientific data on both sides being fully stated."—*Extract from the Preface*

The Transmutation of Bacteria
