submitted 27 july 2017; accepted 29 July 2017

This special issue of Theory and Practice of Logic Programming (TPLP) contains the regular papers accepted for presentation at the 33rd International Conference on Logic Programming (ICLP 2017), held in Melbourne, Australia from the 28th of August to the 1st of September, 2017. ICLP 2017 was colocated with the 23rd International Conference on Principles and Practice of Constraint Programming (CP 2017) and the 20th International Conference on Theory and Applications of Satisfiability Testing (SAT 2017). Since the first conference held in Marseille in 1982, ICLP has been the premier international event for presenting research in logic programming. Contributions to ICLP are sought in all areas of logic programming, including:

- **Implementation** – Compilation, Virtual Machines, Parallelism, Constraint Handling Rules, Tabling.
- **Environments** – Program Analysis, Transformation, Validation, Verification, Debugging, Profiling, Testing.
- **Language Issues** – Concurrency, Objects, Coordination, Mobility, Higher Order, Types, Modes, Assertions, Programming Techniques.
- **Applications** – Databases, Big Data, Data Integration and Federation, Software Engineering, Natural Language Processing, Web and Semantic Web, Agents, Artificial Intelligence, Bioinformatics, and Education.

Three kinds of submissions were accepted:

- **Technical papers**, for technically sound, innovative ideas that can advance the state of logic programming.
- **Application papers**, that impact interesting application domains;
- **System and tool papers**, which emphasize novelty, practicality, usability, and availability of the systems and tools described.
This year, ICLP adopted the hybrid publication model used in all recent editions of the conference, with journal papers and Technical Communications (TCs), following a decision made in 2010 by the Association for Logic Programming. Papers of the highest quality were selected to be published as rapid publications in this special issue of TPLP. The TCs comprise papers which the Program Committee (PC) judged of good quality but not yet of the standard required to be accepted and published in TPLP as well as dissertation project descriptions stemming from the Doctoral Program (DP) held with ICLP.

We received 72 submissions of abstracts, of which 55 resulted in full submissions. The Program Chairs, acting as guest editors of the special issue, organized the refereeing process, which was undertaken by the PC with the support of external reviewers. Each paper was reviewed by at least three referees who provided detailed written evaluations. This enabled a list of papers to be short-listed as candidates for rapid communication. The authors of these papers revised their submissions in light of the reviewers’ suggestions, and all these papers were subject to a second round of reviewing. Of these candidates papers, 21 were accepted as rapid communications, to appear in the special issue. In addition, the PC recommended 13 papers to be accepted as TCs, of which 11 were also presented at the conference (2 were withdraw). These TCs, together with the presentations from the Doctoral Consortium, were published by Dagstuhl Publishing in Volume 58 of their OpenAccess Series in Informatics (OASIcs), available at http://www.dagstuhl.de/oasics. The 21 rapid communications that appear in this special issue are listed below, in alphabetical order of the first author:

- Maria Alpuente, Angel Cuenca-Ortega, Santiago Escobar and Julia Sapiña. *Inspecting Maude Variants with GLINTS (Tool paper).*
- Mario Alviano. *Model enumeration in propositional circumscription via unsatisfiable core analysis.*
- Giovanni Amendola, Nicola Leone and Marco Manna. *Finite model reasoning over existential rules.*
- Bernardo Cuteri, Carmine Dodaro, Francesco Ricca and Peter Schiller. *Constraints, Lazy Constraints, or Propagators in ASP Solving: An Empirical Analysis.*
- Marco Gavanelli, Maddalena Nonato, Andrea Peano and Davide Bertozzi. *Logic Programming approaches for routing fault-free and maximally-parallel Wavelength Routed Optical Networks on Chip (Application paper).*
- Guido Governatori and Michael Maher. *Annotated Defeasible Logic.*
• Amelia Harrison, Vladimir Lifschitz and Dhananjay Raju. Program Completion in the Input Language of GRINGO.
• Tomi Janhunen, Roland Kaminski, Max Ostrowski, Torsten Schaub, Sebastian Schellhorn and Philipp Wanko. Clingo goes Linear Constraints over Reals and Integers.
• Ekaterina Komendantskaya and Yue Li. Productive Corecursion in Logic Programming.
• Joohyung Lee, Nikhil Loney and Yunsong Meng. Representing Hybrid Automata by Action Language Modulo Theories.
• Vladimir Lifschitz. Achievements in Answer Set Programming.
• Panos Rondogiannis and Ioanna Symeonidou. The Intricacies of 3-Valued Extensional Semantics for Higher-Order Logic Programs.
• Alejandro Serrano and Jurriaan Hage. Constraint Handling Rules with Binders, Patterns and Generic Quantification.
• Farhad Shakerin, Elmer Salazar and Gopal Gupta. A New Algorithm to Automate Inductive Learning of Default Theories.
• Carlo Zaniolo, Mohan Yang, Matteo Interlandi, Ariyam Das, Alexander Shkapsky and Tyson Condie. Fixpoint Semantics and Optimization of Recursive Datalog Programs with Aggregates.

After consultation with the PC, the paper “The Intricacies of 3-Valued Extensional Semantics for Higher-Order Logic Programs” was awarded the best paper prize, and the paper “Finite model reasoning over existential rules” was awarded the best student paper prize. The best papers were selected by the PC from those submissions with the joint highest aggregate score, as assigned by the reviewers. Each member of the PC was awarded 4 marks that they could divide between these candidate papers. The best student paper was selected likewise.

In addition to the presentations of accepted papers, the technical program of ICLP 2017 included five invited talks:

• Agostino Dovier (University of Udine, Italy). The role of SAT, CP, and Logic Programming in Computational Biology;
• Holger H. Hoos (Leiden Institute of Advanced Computer Science and University of British Columbia, Canada). The best of both worlds: Machine learning meets logical reasoning;
• Nina Narodytska (VMware Research, USA). Recent advances in Maximum Satisfiability;
• Enrico Pontelli (New Mexico State University, USA). Back to the Future - Parallelism and Logic Programming; and
• Mark Wallace (Monash University and Opturion, Australia). Constraints and the 4th Industrial Revolution.
and the tutorials:

- Guido Tack (Monash University, Australia). *Introduction to Constraint Programming - If You Already Know SAT or Logic Programming*;
- Armin Biere (Johannes Kepler University Linz, Austria). *An Introduction to Satisfiability*;
- Tias Guns (Vrije Universiteit Brussel, Belgium). *Introduction to Machine Learning and Data Science*; and

as well as two *Test-of-Time award* presentations:

The Test-of-Time papers were ranked by using citations as a proxy for impact. The web portals Scopus, Web of Science, Semantic Scholar and Google Scholar were used for collecting citations; care was taken to remove self-citations and check for citations that were split between a conference paper and a follow-up journal paper. The conference technical program was augmented by the already traditional Doctoral Program, organized by Neda Saeedloei and Christopher Mears, and by several pre-conference workshops.

We would like to thank the organizers of these affiliated events for their contributions to the conference as a whole. We are of course also deeply indebted to the Program Committee members and external reviewers, as the conference would not have been possible without their dedicated, enthusiastic and outstanding work. The Program Committee members were:

Mario Alviano  
Marcello Balduccini  
Pedro Cabalar  
Mats Carlsson  
Manuel Carro  
Michael Codish  
Alessandro Dal Pal  
Broes De Cat  
Marina De Vos  
Marc Denecker  
Agostino Dovier  
Ins Dutra  
Esra Erdem

Wolfgang Faber  
Thom Fruehwirth  
Sarah Alice Gaggl  
Graeme Gange  
Maria Garcia De La Banda  
Marco Gavanelli  
Martin Gebser  
Gopal Gupta  
Amelia Harrison  
Manuel V. Hermenegildo  
Tomi Jahnunen  
Andy King

Ekaterina Komendantskaya  
Joohyung Lee  
Michael Leuschel  
Vladimir Lifschitz  
Alessandra Mileo  
Enrico Pontelli  
C. R. Ramakrishnan  
Francesco Ricca  
Ricardo Rocha  
Alessandra Russo  
Chiaki Sakama  
Tom Schrijvers
The external reviewers were:

- Joaquin Arias
- Marc Bezem
- Bernhard Bliem
- Zhuo Chen
- Jonnathan Cook
- Bernardo Cuteri
- Fabio Aurelio D’Asaro
- Ingmar Dasseville
- Besik Dundua
- Andrea Formisano
- Michael Frank
- Daniel Gall
- Jianmin Ji
- Georgios Karachalios
- Arash Karimi
- Michael Kifer
- Ruben Lapauw
- Thomas Linsbichler
- Fangfang Liu
- Yanhong A. Liu
- Kyle Marple
- Michael Morak
- Jose F. Morales
- Falco Nogatz
- Adrian Palacios
- Le Thi Anh Thu Pham
- Javier Romero
- Elmer Salazar
- Vitor Santos Costa
- Lukas Schweizer
- Farhad Shakerin
- Nada Sharaf
- Roni Stern
- Alwen Tiu
- Matthias van der Hallen
- Yi Wang
- Philipp Wanko
- Zhun Yang

We would also like to express our gratitude to the full ICLP 2017 organization committee, namely Maria García de la Banda and Guido Tack, who acted as general chairs; Enrico Pontelli, who served as workshop chair; Tommaso Urli, who acted as publicity chair and designed the web pages; Christopher Mears and Neda Saeedloei, who jointly chaired the Doctoral Program of ICLP and CP; and, finally, Paul Fodor and Graeme Gange, who organized the programming contest.

Our gratitude must be extended to Torsten Schaub, who is serving in the role of President of the Association of Logic Programming (ALP), to all the members of the ALP Executive Committee and to Mirek Truszczyński, Editor-in-Chief of TPLP. Also, to the staff at Cambridge University Press, especially Richard Horley and Samira Ceccarelli, and to the personnel at Schloss Dagstuhl-Leibniz Zentrum für Informatik, especially Marc Herbstritt, for their timely assistance. We would also like to thank the staff of the EasyChair conference management system for making the life of the Program Chairs easier. Thanks should go also to the authors of all submitted papers for their contribution to make ICLP alive and to the participants for making the event a meeting point for a fruitful exchange of ideas and feedback on recent developments.

Finally, we would like to thank our generous gold-tier sponsors – the Association for Logic Programming, the Association for Constraint Programming, the Monash University, the University of Melbourne, CSIRO Data61, COSYTEC and Satalia; our generous bronze-tier sponsors – Google; and our generous donors – the European Association for Artificial Intelligence, the International Journal of Artificial Intelligence, Springer, CompSustNet and Cosling.
