

CLAY MINERALS BULLETIN

Vol. 2 No. 12

DECEMBER, 1954

*Issued by the Clay Minerals Group
of the Mineralogical Society*

PARIS CONGRESS — SPECIAL NUMBER

CONTENTS

- Page*
127. Editorial.
123. C. W. CORRENS. Über die mikroskopische Untersuchung der Minerale in Tonen.
133. G. HONJO, N. KITAMURA and K. MIHAMA. A study of clay minerals by means of single-crystal electron diffraction diagrams—The structure of tubular kaolin.
141. M. NAKAHIRA. The polymorphism of sericite.
146. S. CAILLÈRE, A. OBERLIN et S. HÉNIN. Étude au microscope électronique de quelques silicates phylliteux obtenus par synthèse à basse température.
156. H. PÉZERAT et J. MÉRING. Influence des substitutions isomorphes sur les paramètres de structure des phyllites.
162. S. GOLDSZTAUB, S. HÉNIN et R. WEY. Sur l'adsorption d'ions phosphoriques par les argiles.
166. S. CAILLÈRE, S. HÉNIN et J. ESQUEVIN. Transformation expérimentale de chlorite en montmorillonite.
170. S. M. SHUAIB. A study of minerals in a sediment core from the Gulf of Naples.
176. U. VENTRIGLIA. La plasticité des argiles.
179. U. VENTRIGLIA. Sur les variations chimiques et structurales des différents minéraux des argiles.
183. G. KULBICKI. Phénomènes de diagenèse dans les sédiments argileux.
188. R. GLAESER et J. MÉRING. Isothermes d'hydratation des montmorillonites bi-ioniques (Na, Ca).

(Continued overleaf)

Price to non-members 10/-

CONTENTS—*continued*

- 193 T. SUDO, Long spacing at about 30 Å confirmed from certain clays from Japan.
203. Summaries of papers not printed in full: B. NAGY and W. F. BRADLEY, The structural scheme of sepiolite; R. GREENE-KELLY, The structure of some montmorillonite complexes; R. ROY, Systematic syntheses, equilibrium thermal decomposition and phase relations of typical clay minerals; L. A. ROMO and R. ROY, Synthesis, stability and properties of layer silicates: VII. Anion exchange and cation replacement as studied by infra-red spectroscopy; H. R. SAMSON, Flocculation characteristics of kaolinitic clays; H. VAN OLPHEN, Interlayer forces in bentonite; M. NAKAHIRA, On the thermal transformation of kaolinite and halloysite; V. T. ALLEN, Formation of diasporic clays (U.S.) by secondary processes; W. A. MITCHELL, An occurrence of saponite in vesicular lava; D. CARROLL, Clay mineral investigations in the United States Geological Survey; A. M. BYSTRÖM, "Mixed-layer" minerals from the Ordovician bentonites at Kinnekulle, Sweden; H. HAMDI, Mineralogical study of the alluvial suspended matter of the Nile; G. BARBIER, Extension des échanges d'ions dans des argiles de sols par alternances de dessiccation et d'humectation; W. v. ENGELHARDT, Quantitative Röntgenanalyse von Tonen; U. HOFMANN und E. SCHARRER, Einfluss der Kristallgestalt auf die kolloiden Eigenschaften des Tons; C. SATO, Chemical Studies of the surfaces of clay minerals: 1. Sorption of ammonia and methanol by bentonite; 2. The effect of heat treatments on the subsequent gas adsorption of bentonite.
