CONTENTS

109 Trigeminal satellite cells modulate neuronal responses to triptans: relevance for migraine therapy
Alice de Corato, Alessandro Capuano, Diego Currò, Giuseppe Tringali, Pierluigi Navarra and Cinzia Dello Russo

117 Involvement of calcitonin gene-related peptide and CCL2 production in CD40-mediated behavioral
hypersensitivity in a model of neuropathic pain
Jennifer T. Malon, Swathi Maddula, Harmony Bell and Ling Cao

129 The effects of L-NAME on neuronal NOS and SOX1 expression in the DRG–spinal cord network of
axotomised Thy 1.2 eGFP mice
Matthew J. G. Bradman, Richard Morris, Anne Mcardle, Malcolm J. Jackson and
Thimmisettoppaa Thippeswamy

143 Direct and glia-mediated effects of GABA on development of central olfactory neurons
Heather S. Mallory, Nicholas J. Gibson, Jen H. Hayashi, Alan J. Nighton and Lynne A. Oltens

163 Exposure to environmental enrichment prior to a cerebral cortex stab wound attenuates
the positional astroglia response in rats
Ximena A. Lamas, Spencer Santernce and Jorge A. Colasens

174 ATP derived from astrocytes modulates memory in the chick
Marie E. Gibbs, Xenia Mournik, Geoffrey Burnstock and David N. Bonna

179 Specific ligand Vperimentexerts a neuroprotective effect by suppressing microglial
inflammation
Yan-Yin Zhao, Jie-Zhong Yu, Qin-Ying Li, Can-Gen Ma, Chuan-Zhen Lu and Bao-Guo Xue

199 Analysis of glutathione S-transferase genes polymorphisms and the risk of schizophrenia in a sample
of Iranian population
Farahn Fatih Kharsh, Der Mohammad Hadi-Tanamadi, Mohammad Hashemi,
Faramarz Kesh–Tanamadi and Ati-Tebkanantj

205 Evidence of microglial activation in autism and its possible role in brain underconnectivity
Juan I. Rodriguez and Janet K. Kern
**Neuron Glia Biology**

**Aims and Scope**

Neuron Glia Biology publishes high-impact original research articles reporting significant discoveries in neuron-glia interactions that advance the understanding of such biological processes as synaptogenesis, synaptic plasticity, and the role of glial cells in the structural and functional activities of the brain. The journal is also interested in reviewing opportunities and implications that arise from such research.

**Subscriptions**

Neuron Glia Biology (ISSN 1740-925X) is published twice a year (in January and July) by Cambridge University Press. For institutions, the subscription price in 2022 for Volume 20 is £164 / US$267 / €184 / $267 (print) and £164 / US$267 / €184 / $267 (online) per annum. Single issues are available at the current price only.

**Manuscript Submission and Review**

Neuron Glia Biology accepts submissions on all aspects of neuron-glia interactions. Original research articles up to 3000 words (excluding references) in length are encouraged. Authors should submit their manuscripts online via the journal’s website. All manuscripts are reviewed by at least two reviewers and all revisions must be submitted in electronic copy. Authors should keep a copy of their original, final submission for reference in case of rejection or to supply any additional information requested by the reviewers.

**Manuscript Preparation and Style**

Manuscripts must be typed in English of clearly displayable, legible font, preferably Times New Roman 12 pt., and double spaced with margins of at least 2 cm (1 in) on both sides of the paper. A 10 pt. font size should be used for the reference list and any other text that is included in the supplementary material.

**Copyright**

The copyright for this journal is held by Cambridge University Press. The publisher's consent is required for all forms of reproduction in excess of those normally permitted under Section 28 of the U.K. Copyright Act, 1956. For details see http://www.cambridge.org/journals.

**Abstracts**

At least one paragraph containing the objective of the experiment is to be submitted with the manuscript so that referees may readily evaluate the data. Figures, tables, or other materials presented in the abstract will be published only if additional information is provided in the final version of the manuscript.

**Materials and Methods**

Materials and procedures should be described in sufficient detail to permit others to reproduce the experiments. In methods sections, any claims regarding unexpected results should be avoided, and specific details should be provided. All new techniques, especially those that promise a significant advance in the field, should be described in detail. The results should be presented in the context of the literature and should be contrasted with previous findings in the field. The results should be presented in an arresting fashion, without reference to the text. The tables should be cited and is in agreement with the figures.

**References**

A list of references should be supplied no larger than two columns. The references should be cited in the text in the order of their appearance. References should be listed in alphabetical order by the name of the first author. Journal abbreviations should be those accepted by the International Committee on Biological Standardization. Please check the latest issue of the journal for the correct format. All works must be cited in the text.

**Revised Manuscripts**

Revised manuscripts should be submitted online via the journal’s website. Revised versions should be submitted in electronic copy and be clearly marked as a revised version. Revised manuscripts should be of sufficient quality to enable reviewers to evaluate the significance of the changes made to the original manuscript. All revised manuscripts should be accompanied by a letter indicating the revisions made.

**Ethical Approval**

Every effort will be made to notify authors of animal and human subjects. Every effort will be made to notify authors of any ethical issues raised during the publication process. Authors should avoid using colour unnecessarily. Authors should consult the journal’s website for the latest information on ethical guidelines.

**Funding**

The journal is open to financial support from all sources, including commercial and government organizations.

**Publication Charges**

The journal is open to financial support from all sources, including commercial and government organizations.

**Figure Legends**

Figure legends should be supplied no larger than two columns. The legends should be in the order of their appearance in the text. Each figure should have a title and be numbered sequentially. Legends should be concise and accurate. Each figure should be cited in the text.

**Tables**

Tables should be cited in the order of their appearance in the text. Each table should have a title and be numbered sequentially. Tables should be concise and accurate. Each table should be cited in the text.

**Supplementary Material**

Supplementary material should be included only if it contains data that support the conclusions of the paper. Supplementary material should be citable and should be included in the final version of the manuscript.
