Steven H. Waterman, MD

NOW, FOR THE HIGH RISK OF CV CATHETER RELATED INFECTION, THERE'S THE HIGHER REWARD OF INFECTION CONTROL.

Maintaining the delicate balance of the patient at high risk of infection is the concern of all in critical care medicine. For the immuno-compromised or high-risk patients, infection can be life-threatening. And for everyone involved, infection is very expensive.

Now Becton Dickinson Critical Care Monitoring answers your concerns about catheter related infection with

the first short term CV catheter featuring built-in infection control. Only Safe-Dwel[®] catheters from Becton Dickinson come complete with VitaCuff[†], the antimicrobial collagen cuff clinically proven to dramatically reduce catheter related infections. That means significant care and cost advantages.

The next time the risk of infection is high, choose the higher rewards of effective infection control. Choose Safe-Dwel CV catheters with VitaCuff from Becton Dickinson.

The CURITY™ Infection Control System, featuring the ULTRAMER™ Catheter, reduces the incidence of UTI by 75%:

If you're an infection control nurse, dealing with UTI is one of your biggest problems.

But there is a way to make it a much smaller problem- 75% smaller, to be exact.

It's the CURITY Infection Control System from Kendall, and clinical studies have proven that it actually reduces the incidence of UTI by 75%. No other product on the market even comes close.

Evaluation of the
Curity Infection Control System
in Preventing Catheter Associated
Urinary Tract Infections
A Kendall Company

¹Data on file.

Why is the CURITY Infection Control System so effective? Because it systematically combats UTI at the four most likely sites of infection.

At the Catheter/Meatal Junction, the System's unique ULTRAMER Catheter maintains a high degree of lubricity, while indwelling, thus minimizing irritation.

At the Catheter/Tubing Junction, the Tamper Discouraging Seal guards against improper sampling.

At the Tubing/Drainage Ban Junction, the MONO-FLO™ Anti-Reflux Device prevents urine backwash from the bag back into the tube.

At the Drainage Port, the PVP-I drainspout

ye, UTI.

prevents bacteria from entering the bag, thus preserving a sterile environment.

What's more, the CURITY Infection Control system has also been carefully designed to encourage proper, safe usage. And no nursing intervention is necessary to make the system work-it is pre-assembled.

To learn more about the Kendall commitment to infection control, just return the coupon. Because the sooner you say hello to the CURITY Infection Control System, the sooner you can say goodbye to UTI.
