The Journal of Institutional Economics is an interdisciplinary journal that will be of interest to all academics working in the social sciences, including economics, business studies, sociology, politics, geography, anthropology and philosophy. The Journal of Institutional Economics aims to provide all authors with an equal voice within a timeframe of 90 days of submission.

All manuscripts must be submitted online via the website: www.manuscriptcentral.com/joie

Detailed instructions for submitting your manuscript online can be found at the submission website by clicking on the “Instructions and Forms” link in the top right of the screen, and then clicking on the “Submit manuscript” instruction on the following page.

The Editor will acknowledge receipt of the manuscript, provide it with a unique reference number and assign it to reviewers. The reference number of the manuscript should be quoted in all correspondence with JOIE Office and Publisher.

Articles should not be distinguished by the personal identity or identity of any author of the article under the article itself, or in the preface of the electronic file. Normally, articles (including footnotes and references) must not be longer than 5,000 words. In special cases, such as an extended review or survey article, this limit may be extended to 12,000 words. A declaration of the total word count (including footnotes and references) must accompany it or be within the article.

Papers with some formal content will be considered if it is fully explained for a general readership, the mathematics is composed as much as possible to appendix, the assumptions have sufficient grounding in reality, and the paper enhances our understanding of the paper. In contrast, institutional economics regards institutions as costly to produce, and uses human behavior in social customs and institutions in order to make decisions. Institutional economics addresses the issues of learning and cognition, and their relationship with institutional structures, cultures, routines, and habits.

The Journal of Institutional Economics is dedicated to the development of cutting-edge research within the broad conception of institutional economics. It accompaniments research in both the ‘original’ and ‘new’ traditions of institutional economics, from Granovetter, Thomas H. Vikes, John G. Commons, Wesley Mitchell and Gunnar Myrdal, to Ronald Coase, Oliver Williamson, Douglass North and many others.

The Journal of Institutional Economics promotes theoretical and empirical research that enhances our understanding of the nature, role and evolution of socio-economic institutions. For the past years, papers with some formal content will be considered if it is fully explained for a general readership, the mathematics is composed as much as possible to appendix, the assumptions have sufficient grounding in reality, and the paper enhances our understanding of the paper. In contrast, institutional economics regards institutions as costly to produce, and uses human behavior in social customs and institutions in order to make decisions. Institutional economics addresses the issues of learning and cognition, and their relationship with institutional structures, cultures, routines, and habits.

CONTENTS

1 Max U versus Humanomics: a critique of neo-institutionalism
Deirdre Nansen McCloskey

29 Institutions and economic history: a critique of professor McCloskey
Amer Greif and Joel Mokyr

45 Ideas or institutions? – a comment
Guido Tabellini

49 Can two observations confirm a theory? A comment on Max U versus Humanomics
Robert A. Layson

53 Institutions for getting out of the way
Richard N. Langlois

63 The humanities are scientific: a reply to the defenses of economic neo-institutionalism
Deirdre Nansen McCloskey

79 Institutional complementarities in the dynamic comparative analysis of capitalism
Bruno Amable

105 The origins of private property rights: states or customary organizations?
Ila Mitra and Jennifer Montažahroviç

129 Institutional development, transaction costs and economic growth: evidence from a cross-country investigation
Mira Komai and Rob Spruk

161 The French revolution and German industrialization: dubious models and doubtful causality
Michael Kopits and Daniel W. Bromley

191 A spatial analysis of incomes and institutional quality: evidence from US metropolitan areas
Jamie Bologna, Andrew T. Young and Donald J. Lacombe

217 Tit-for-tat in trade policies: nothing but a fest for vested interests?
Barbara Dluhosch

241 Agent-based computational models – a formal heuristic for institutionalist pattern modelling?
Claudius Grabner
