

# THE CAMBRIDGE ENCYCLOPEDIA OF HUMAN EVOLUTION

Edited by STEVE JONES, ROBERT MARTIN, and DAVID PILBEAM  
Executive Editor: SARAH BUNNEY Foreword by RICHARD DAWKINS

Now available in paperback, this superbly illustrated encyclopedia is the most comprehensive exploration of the evolution of the human species ever produced in a single volume.

Written by an outstanding team of over 70 experts in the field, it covers a huge range, from genetics and fossil origins to human biology and ecology, brain function and behaviour.

- Foreword by Richard Dawkins, author of *The Selfish Gene*, and *The Blind Watchmaker*
- Distinguished volume editors, including Steve Jones, 1991 Reith Lecturer for BBC Radio
- Beautifully illustrated with over 500 photographs, line diagrams, maps and ready-reference tables

'... There is no better single source ... for finding brief, accurate, and current synopses of the issues, problems, and methods of analysis within the domain of human evolutionary studies.'

*American Journal of Physical Anthropology*

'... this is a fine book; a worthy addition to the excellent *Cambridge Encyclopedia* series.

Great to have on the shelves'

Colin Tudge, *New Scientist*

## No. 1 (February 1994)

JIN, LI <i>and</i> CHAKRABORTY, RANAJIT. Population dynamics of DNA fingerprint patterns within and between populations	1
TOMARU, MASATOSHI <i>and</i> OGUMA, YUZURU. Genetic basis and evolution of species-specific courtship song in the <i>Drosophila auraria</i> complex	11
ORTORI, C. A.; CHAMBERS, D. <i>and</i> BROOKFIELD, J. F. Y. The molecular basis of instability of the <i>singed</i> <sup>very weak</sup> mutation in <i>Drosophila melanogaster</i>	19
KIMURA, KIYOSHI <i>and</i> KIDWELL, MARGARET, G. Differences in <i>P</i> element population dynamics between the sibling species <i>Drosophila melanogaster</i> and <i>Drosophila simulans</i>	27
GIMELFARB, A. <i>and</i> LANDE, R. Simulation of marker assisted selection in hybrid populations	39
THOMPSON, R. <i>and</i> ATKINS, K. D. Sources of information for estimating heritability from selection experiments	49
SNIEGOWSKI, PAUL D.; PRINGLE, ANNE <i>and</i> HUGHES, KIMBERLY A. Effects of autosomal inversions on meiotic exchange in distal and proximal regions of the X chromosome in a natural population of <i>Drosophila melanogaster</i>	57
HIGGS, PAUL G. Error thresholds and stationary mutant distributions in multi-locus diploid genetics models	63
BOOK REVIEWS	79
DNA Fingerprinting: State of the Science. <i>S. D. J. Pena, R. Chakraborty, J. T. Epplen and A. J. Jeffreys eds.</i> ERIC REEVE	
Preconception and Preimplantation Diagnosis of Human Genetic Disease. <i>R. G. Edwards ed.</i> JOHN D. WEST	
Molecular Genetics for the Clinician. <i>By D. J. H. Brock.</i> PARVEEN KUMAR	
The New Genetics: Baillière's Clinical Paediatrics. Vol. 1 No. 2. <i>I. D. Young ed.</i> DAVID BROCK	
Éléments de génétique quantitative et application aux populations animales. <i>B. Bibé, B. Bonaiti, J.-M. Elsen and others eds.</i> WILLIAM G. HILL	
Genetics for Beginners. <i>By Steve Jones and Borin Van Loon.</i> ERIC REEVE	
BOOKS RECEIVED	85

## No. 2 (April 1994)

WEST, JOHN D. <i>and</i> FLOCKHART, JEAN H. Genotypically unbalanced diploid ↔ diploid foetal mouse chimaeras: possible relevance to human confined mosaicism	87
HORI, MANABU <i>and</i> TAKAHASHI, MIHOKO. Phenotypic conversion of mating type specificity induced by transplantation of macronucleoplasm in <i>Paramecium caudatum</i>	101
VILLANI, F.; PIGLIUCCI, M. <i>and</i> CHERUBINI, M. Evolution of <i>Castanea sativa</i> Mill. in Turkey and Europe	109
GIRONDOT, MARC; ZABORSKI, PATRICK; SERVAN, JEAN <i>and</i> PIEAU, CLAUDE. Genetic contribution to sex determination in turtles with environmental sex determination	117
YANNOPOULOS, GEORGE; ZABALOU, SOPHIA; STAMATIS, NIKOS <i>and</i> TSAMATHIS, GEORGE. Differential regulation of <i>P</i> and <i>hobo</i> mobile elements by two laboratory strains of <i>Drosophila melanogaster</i>	129
SHORT PAPER	
NUZHDIN, SERGEY V. <i>and</i> MACKAY, TRUDY F. C. Direct determination of retrotransposon transposition rates in <i>Drosophila melanogaster</i>	139
ABSTRACTS OF PAPERS PRESENTED AT THE FOURTH MAMMALIAN GENETICS AND DEVELOPMENT WORKSHOP HELD AT THE WELLCOME TRUST BUILDING, EUSTON ROAD, LONDON ON 1–3 NOVEMBER 1993	145

BOOK REVIEWS	163
Managing Global Genetic Resources: Livestock. WILLIAM G. HILL	
Locus Maps of Complex Genomes: Genetic Maps 6. <i>Stephen J. O'Brien ed.</i> ERIC REEVE	
BOOKS RECEIVED	167
<b>No. 3 (June 1994)</b>	
PETERS, J.; BEECHEY, C. V.; BALL, S. T. <i>and</i> EVANS, E. P. Mapping studies of the distal imprinting region of mouse Chromosome 2	169
KONYUKHOV, BORIS V.; KINDYAKOV, BORIS N. <i>and</i> MALININA, NATALIA A. Effects of the <i>white</i> allele of the <i>mi</i> locus on coat pigmentation in chimeric mice	175
REDINA, OLGA E.; ZHELEZOVA, ANTONINA I.; GOLUBITSA, ALEVTINA B.; AGULNIK, ALEXANDER I. <i>and</i> RUVINSKY, ANATOLY O. Phenotypic expression of the fused ( <i>Fu</i> ) gene in chimaeric mice	183
SHIMADA, TORU; HASEGAWA, TSUYOSHI; MATSUMOTO, KAYOKO; AGUI, NORIAKI <i>and</i> KOBAYASHI, MASAHIKO. Polymorphism and linkage analysis of prothoracicotropic hormone gene in the silkworm, <i>Bombyx mori</i>	189
BIÉMONT, C.; LEMEUNIER, F.; GARCIA GUERREIRO, M. P.; BROOKFIELD, J. F.; GAUTIER, C.; AULARD, S. <i>and</i> PASYUKOVA, E. G. Population dynamics of the copia, mdg1, mdg3, gypsy and P transposable elements in a natural population of <i>Drosophila melanogaster</i>	197
CHARLESWORTH, BRIAN. The effect of background selection against deleterious mutations on weakly selected, linked variants	213
BOOK REVIEWS	229
Superantigens: A pathogen's view of the immune system. <i>Brigitte T. Huber and Ed Palmer eds.</i> ELEANOR RILEY	
Transcriptional Regulation: Two Volumes. <i>Steven L. McNight and Keith R. Yamamoto eds.</i> ROBERT E. GLASS	
Molecular Genetics of <i>Drosophila</i> Oogenesis. <i>By Paul F. Lasko.</i> MARY BOWNES	
Gene Targeting: A Practical Approach. <i>Alexandra L. Joiner ed.</i> J. MCWHIR	
Experiments With Fission yeast: A Laboratory Course Manual. <i>By Caroline Alfa, Peter Fantes, Jeremy Hyams, Maureen McLeod and Emma Warwick.</i> STUART MACNEILL	
Microbial Cell-Cell interactions. <i>Martin Dworkin ed.</i> G. S. BEALE	
BOOKS RECEIVED	235
ERRATUM	236

## NOTES TO CONTRIBUTORS

**GENETICAL RESEARCH** publishes original work on all aspects of genetics, or in any field of research which has an important bearing on genetics. Reviews of topical interest will also be considered. Papers will be submitted to referees, and will generally be printed in order of acceptance. Short papers (see below) will be given priority in publication.

**CONTRIBUTIONS** are welcomed from scientists of all nationalities but must be written in English. Papers should be sent to one of the Executive Editors (see addresses inside front cover), or to a member of the Editorial Board with a particular interest in that area of genetics. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers should be as concise as clarity permits, and illustrations should be restricted to the *minimum needed*.

**SHORT PAPERS** This category is designed for concisely written reports of work for which rapid publication is considered desirable. Such papers will normally be published within three months of receipt in acceptable form. They should not exceed 4 pages of print in length, and should include a summary.

**TYPESCRIPTS** A top copy and two other copies should be submitted. The top copy should be typed with double-spacing on one side of good quality paper, leaving margins of about 1½ inches at the left-hand side and at the top and bottom of each sheet. Each copy should include a complete set of illustrations. The title should ordinarily identify the organism. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper, and changes of address may be added in footnotes. A footnote to the title page should also give the name and address to whom reprint requests may be made. Sources of financial support should be included with other acknowledgements at the end of the text. The title page of the typescript should include a short title for running headlines (limited to 50 letters and spaces), and the name and address of the author (or his proxy) to whom the proofs are to be sent, under the heading: *Proofs to be sent to . . .* Main headings should be typed in capitals and (except summary and references) numbered consecutively. Subheadings should be typed in lower case, and underlined except for those words and symbols which would be italicized in the text. Subheadings should be numbered (i), (ii), etc., within each main heading. **Numeral 1 and letter e: if your typewriter uses one symbol for both, please make clear to the Printer which is intended in formulae, gene symbols, etc.**

**SUMMARY** The summary will be printed at the beginning of the paper. It should give a concise abstract of the significant content and conclusions of the paper, in a form suitable for abstracting journals to use, and should not exceed 250 words.

**ILLUSTRATIONS** The separate category of Plates no longer applies in the new format. All illustrations, including photographs, diagrams, graphs etc. are to be labelled consecutively Figure 1, 2 . . . according to their relative positions in the text. Each figure should have a legend to be printed underneath it. Photographs should be supplied as unmounted glossy prints, with a sketch or separate set to show the arrangement required when several photographs are to form one figure. The names of the

authors and the orientation of the figure should be indicated on the back of each photograph. *Diagrams* should be about twice the size of the printed figure, but not larger than 12×8 inches, unless exceptionally complicated, and the thickness of lines and size of points should be determined accordingly. They may be submitted as glossy photographic prints or be drawn in indian ink on white Bristol-board, tracing linen or graph paper ruled in pale blue (but not other colours). The lettering on drawings should be lightly inserted *in soft pencil only*, so that the printer can put in the finished lettering. Legends to illustrations must be given on a separate sheet of paper. Each illustration must have the name of the author and figure number pencilled on the back.

**TABLES** Each table should be typed on a separate sheet of paper and its approximate position in the text indicated on the typescript. Each should be numbered and carry an appropriate title. The table should be designed, whenever possible, to be printed in the normal orientation of the text. The data should be grouped so as to make the use of rules unnecessary. Vertical rules, in particular, are expensive to print, and will only be included at the Editor's discretion. Table footnotes should ordinarily employ the symbols \*, †, ‡, §, ||, ¶, \*\*, etc., in that order.

**SYMBOLS** Gene and mathematical symbols should generally be printed in italics. Please underline those to be italicized when they appear in the text and tables. Bold letters add to printing costs and should only be used where they are necessary to avoid confusion. The author must assume responsibility for the accurate printing of complex mathematical formulae submitted in typewritten form, by differentiating between letters and numbers which are open to misinterpretation, and identifying all Greek, Hebrew and script letters by means of marginal notes at their first appearance. Note that Greek symbols cannot be italicized and that '+' as the symbol for a wild-type allele should not be italicized.

**NOMENCLATURE** Wherever possible, standardized nomenclature should be employed. The author should refer to the following publications for guidance: Novick *et al.* (*Bacteriological Reviews* 40, 168–189) for plasmids; O'Brien (Ed.), *Genetic Maps* 6, Cold Spring Harbor 1993, for recent information on most species and recent gene lists.

**REFERENCES** should follow the normal usage in the journal. In the list of references at the end of the paper, *both titles of articles and names of periodicals* should be written out in full.

**PROOFS** Two sets of single-sided page proofs, together with the typescript of each paper will be sent to the author. The printers' marked proof should be returned after correction to the Executive Editor, together with the typescript. Excessive alterations, other than corrections of printers' errors, may be disallowed or charged to the author. Corrections should be made using the symbols in British Standard 1219: 1958, or its shortened version B.S. 1219C: 1958.

**OFFPRINTS** Fifty offprints of each paper, or short paper, are provided free of charge. Additional offprints may be ordered in the form sent out with proofs, provided this is returned within fourteen days of receipt.
