The Journal of Glaciology publishes original articles and letters concerning scientific research into any aspect of ice and snow, and interactions between ice, snow, climate and other environmental phenomena including the biosphere and permafrost. Research techniques described in the Journal include, for example, field studies, remote sensing, computer modelling and laboratory studies. Research topics include the nature of and changes in mountain glaciers and ice sheets, including former ice sheets. For example, ice cores extracted from the glaciers and ice sheets reveal detailed information on past atmospheric composition and climate, and changes in the extent and thickness of the ice sheets are also related to climate change. The physical, chemical and crystallographic properties of ice and snow are included, especially but not only as they relate to the flow of ice and to past climate. The Journal also publishes studies of sea ice, and of icebergs, along with their interactions with climate on shorter time scales, and with the ocean. Snow and avalanche research is included in the Journal, with several recent articles investigating avalanche dynamics. Snow and ice on other planets is also within the realm of the Journal of Glaciology, as are studies of atmospheric ice.

Instructions to authors
Detailed instructions to authors are available online here: cambridge.org/core/journals/journal-of-glaciology/information

The Journal of Glaciology publishes two types of paper:

- articles on new glaciological findings and theories, or new instruments and methods, or up-to-date, coherent articles reviewing a glaciological subject
- letters of a topical nature, or comments on papers previously published in the Journal

Papers submitted should be:

- of high scientific quality
- complete and clear
- substantially different from previously published work

Length

Papers should be concise. Lines and pages should be numbered. Papers more than 12 Journal pages in length should be cleared with the Chief Editor before submission (one Journal page = about 1000 words). Letters are limited to five Journal pages.

Original submission

Submit your paper via the Journal of Glaciology online submission system at https://mc.manuscriptcentral.com/jog

Review process

Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English will be rejected without review.

You will be sent a proof of your text and illustrations to check and correct (you will have to pay for any substantial alterations made at this stage).

Final submission

The final accepted version of the paper should be in electronic format:

- Acceptable formats are – Text (including tables and figure captions) – Word, rtf or LaTex (the IGs class file should be used; downloadable from the website). Please also supply a final PDF

- Figures – ideally in tif or eps format (or otherwise in the format in which they were created)

- Responsibility for the accuracy of all data (including references) rests with the authors

Supplementary material

The Journal of Glaciology accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

General points

- Title should be concise
- Abstract should be less than 200 words
- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should – be one or two column widths: up to 85 mm or up to 178 mm – not be in boxes – use strong black lines (avoid tinting if possible) – use SI units in labels – use Optima, Arial or a similar sans serif font in labels
- Tex authors: please provide a pdf of the whole paper (text, tables, figures and captions) as well as the individual Latex and graphics files
- Equations should – be set in MathType or advanced equation editor – NOT be embedded as graphics in the text
- Tables should – be numbered in Arabic – be referred to in text (as Table 1 etc.) – NOT be submitted as illustrations
- All citations in text should include the author name(s) and the year of publication (e.g. Smith, 2010). Smith and Jones, 2012; Smith, 2012, and Jones, 2014) and must have an entry in the reference list
- Reference lists should – be concise – be complete and accurate, including doi numbers – be provided in precise Journal format, including punctuation and emphasis (see past papers for style)
- be arranged in alphabetical order by first author’s surname
- include works accepted but not published as “in press” - not include personal communications, unpublished data or manuscripts in preparation or submitted for publication (these should be included in the text)

Open Access and page charges

As a gold open access journal, the Journal of Glaciology is published without restriction and recovers no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or his/her funding body or institution. The APC for non-IGs members is £3,280 for a regular article and £540 for a letter. The APC for IGs members is £1,080 for a regular article and £360 for a letter. The APC’s quoted here are correct for 2016.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGs. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

Cambridge Core terms of use, available at https://www.cambridge.org/core/terms

Access to Rightslink Services for Customers

As a customer you have the option of using the customer service Rightslink provided by the journal’s publisher. If you wish to use the customer service Rightslink, you will need to register an account with Rightslink. Please note that the customer service Rightslink will continue to provide all the same services as before, and will also provide all the same services as before.

199–217 An 11-year record of mass balance of Brewster Glacier, New Zealand, determined using a geostatistical approach
Nicola J. Cullen, Brian Anderson, Pascal Sguigny, Dorothea Stumm, Andrew MacInnis, Jonathan P. Conway, Huw J. Horgan, Rúzsa Dádik, Sean J. Fitzsimons, Andrew Lenton

218–228 Climate and surface mass balance of Mocho Glacier, Chilean Lake District, 40°S
Marius Schaefer, Jose Luis Rodriguez, Matthas Scheitler, Gino Casassa

299–318 Spatially distributed runoff at the grounding line of a large Greenlandic tidewater glacier inferred from plume modelling
Donald Slater, Peter Neice, Andrew Sole, Tom Courtois, Ruth Mottram, Peter Langen, Douglas Mac

324–330 Seasonal control of Petermann Gletscher ice-shelf melt by the ocean’s response to sea-ice cover in Nares Strait
E L Shroyer, L. Padman, R. M. Samelson, A. Munchow, L. A. Stearns

331–342 Slight glacier mass loss in the Karakoram region during the 1970s to 2000 revealed by KN-9 images and SRTM DEM
Yuqian Zhou, Zhiwei Li, Xia Li

343–354 Geometry, mass balance and thinning at Eklutna Glacier, Alaska: an altitude-mass-balance feedback with implications for water resources
Louis C. Sais, Michael G. Loio, Jason Geck, Evan E. Thom, Daniel McGuath

355–360 Snowbreeder 5: a Micro-CT device for measuring the snow-microstructure evolution under the simultaneous influence of a temperature gradient and compaction
Mareike Wiese, Martin Schneebeli

361–371 Last Glacial climate reconstruction by exploring glacier sensitivity to climate on the southeastern slope of the western Nyaiqentanglha Shan, Tibetan Plateau
Xiangke Xu, Baolin Pan, Guocheng Dong, Chao Li, Neil F. Glasser

372–381 Measurements of wave damping by a grease ice slick in Svalbard using off-the-shelf sensors and open-source electronics
Jean Rabaut, Graig Sutherland, Olav Gundersen, Atle Jensen

Letter
382–386 Revealing the surge behaviour of the Yangtze River headwater glacier during 1989–2015 with TanDEM-X and Landsat images
Guang Liu, Huadong Guo, Shiyong Yan, Rui Song, Zhixing Ruan, Mingyang Lu
