INTRODUCTION TO PLASMA THEORY

Dwight R. Nicholson, University of Iowa

Clearly written, this text gives students a complete introduction to all important topics in plasma theory. And none of the mathematical steps are skipped in the derivations. Easy-to-follow introductions are given to such modern topics as solitons, parametric instabilities, and weak turbulence theory. Each chapter ends with a set of well-chosen problems which apply the theory to practical examples and short exercises which assist in the learning process. 144 illustrations are included to clarify the mathematical development and a table of important practical formulas can be found inside the front cover of the book.

Suitable for both a one year graduate course or a one semester senior level undergraduate course.

approx. 448 pp. (0 471-09045-X)

To be considered for complimentary copies, write to Clayton Gordon, Dept. 3-8590. Please include course name, enrollment, and title of present text.
JOURNAL OF PLASMA PHYSICS exists for the publication of experimental and theoretical research papers on plasma physics and its applications.

EDITOR

Dr J. P. DOUGHERTY
Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS

Prof. D. BERSHADER
Department of Aeronautics and Astronautics, Stanford University, Stanford, California 94305, U.S.A.

Prof. F. D. KAHN
Department of Astronomy, University of Manchester, Manchester M13 9PL, England

Prof. W. B. THOMPSON
Department of Physics, University of California, La Jolla, California 92039, U.S.A.

Authors wishing to have papers published in the JOURNAL should communicate them to any one of the persons named above, choosing one in their own country where possible.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 15 in. by 24 in. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

Copying

This journal is registered with the Copyright Clearance Center, 21 Congress St., Salem, Mass. 01970. Organizations in the U.S.A. who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of U.S. copyright law) subject to payment to C.C.C. of the per copy fee of $02.50. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022-3778/82/2828-0001 $02.50.

ISI Tear Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, U.S.A., is authorized to supply single copies of separate articles for private use only.

For all other use, permission should be sought from the Cambridge or New York offices of the Cambridge University Press.

JOURNAL OF PLASMA PHYSICS (ISSN 0022-3778) is published once every two months in February, April, June, August, October and December, by Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU and 32 East 57th Street, New York, N.Y. 10022.

Three parts form a volume. The subscription price (which includes postage) of Volumes 27 and 28 (1982) is £62.50 net per volume (US $177.00 in the U.S.A. and Canada) for institutions; £31.25 (US $88.50) per volume for individuals. Single parts cost £23.50 each (US $66.50 in the U.S.A. and Canada) plus postage. All orders must be accompanied by payment.

Copies of the journal for subscribers in the United States of America and Canada are sent by air to New York to arrive with minimum delay.

Second class postage paid at New York, N.Y., and at additional mailing offices. POSTMASTER: send address changes in U.S.A. and Canada to Cambridge University Press, 32 East 57th Street, New York, N.Y. 10022.
CONTENTS TO VOLUME 28

PART 1 AUGUST 1982

Hydrodynamic theory of drift Kelvin-Helmholtz instabilities. A. B. MIKHAILOVSKII  

Stationary waves at the interface between a plasma stream and a magnetic field. B. K. SHIVAMOGGI  

Filamentation and collapse of Langmuir waves in a weak magnetic field. P. ROLLAND and S. G. TAGARE  

Electron acceleration by stochastic wave packets. P. ROLLAND  

On the evolution of normal ionizing shock waves in helium. V. S. SYNAKH and V. V. ZAKAJDAKOV  

Thermal conductivity in a laser-created plasma heated by inverse bremsstrahlung absorption. R. BALESCU  

Wave propagation in the presence of a spatially uniform external periodic magnetic field in two-temperature plasma. S. K. GHOSH  

Finite-n ballooning mode theory for axisymmetric toroidal plasmas. R. W. MOORE and D. DOBROTT  

Stability of a positive column in the presence of an axial magnetic field. M. S. UBEROI and C. Y. CHOW  

A formulation for computation of a class of collision-free plasmas in two dimensions. J. W. DUNGEY  

Decay of the lower-hybrid wave into an ion cyclotron mode and a whistler wave. M. K. SAXENA  

Nonlinear transient signal propagation in homogeneous plasma. D. JOVANOVIC, H. L. PECSELI and K. THOMSEN  

The effects of thermal motion of neutrals on the non-potential instabilities in a weakly ionized sodium plasma. V. J. ŽIGMAN and B. S. Milić  

Constitutive relation for slowly varying warm plasmas. K. SUCHY

PART 2 OCTOBER 1982

Anomalous transport coefficients in a magnetized turbulent plasma. X. QIU and R. BALESCU  

Nonlinear wave interactions in a collisionless space and time dependent warm fluid plasma. J. LARSSON  

A study of the mass ratio dependence of the mixed species collision integral. A. J. M. GARRETT  

The effect of magnetic shear on the crossfield current-driven ion-acoustic instability. R. BHARUTHRAM and M. A. HELLBerg  

A linear and quasi-linear investigation of the crossfield current-driven ion-acoustic instability. R. BHARUTHRAM and M. A. HELLBerg
### Contents

Investigation of plasma–wall interaction by H alpha resonant scattering in the tokamak UNITOR. G. REINHOLD, J. HACKMANN and J. UHLENBUSCH 281

The mean electromotive force generated by random Alfvén waves in a collisionless plasma under a non-uniform mean magnetic field. T. NAMIKAWA and H. HAMABATA 293

The mean electromotive force generated by random hydromagnetic waves in a collisionless plasma. T. NAMIKAWA, H. HAMABATA and Y. HOSOYA 299

The mean electromotive force generated by random Alfvén waves in a collisionless non-uniform plasma. H. HAMABATA, T. NAMIKAWA and Y. HOSOYA 309

Similarity solutions for nonlinear damping of Alfvén waves. J. F. MCKENZIE 317

Magneto-acoustic oscillations as a plasma diagnostic technique for a current-carrying plasma column. M. H. BRENNAN, A. L. McCARTHY and M. L. SAWLEY 325

Fast magnetic field-line reconnexion in a compressible fluid. Part 1. Coplanar field lines. A. M. SOWARD and E. R. PRIEST 335

Cylindrical plasma equilibria maintained by means of a rotating magnetic field. W. N. HUGRASS 369

**PART 3 DECEMBER 1982**

Stability of solitary wave solutions of simultaneous nonlinear Schrödinger equations. J. C. BHAKTA and M. R. GUPTA 379

The crossfield current-driven ion-acoustic instability in a collisional plasma. R. BHARUTHRAM, M. A. HELLEBERG and R. D. LEE 385

The shear Alfvén continuous spectrum of axisymmetric toroidal equilibria in the large aspect ratio limit. C. E. KIERAS and J. A. TATARONIS 395

Fast magnetic field-line reconnexion in a compressible fluid. Part 2. Skewed field lines. A. M. SOWARD 415

Generalized expressions for momentum and energy losses of charged particle beams in non-Maxwellian multi-species plasmas and spherical symmetry. S. CUPERMAN, I. WEISS and M. DRYER 445

Evolution of nonlinear Alfvén waves propagating along the magnetic field in a collisionless plasma. M. KHANNA and R. RAJARAM 459

Growth rates of bending KdV solitons. E. W. LAEDKE and K. H. SPATSCHEK 469

Stochasticity in plasmas with electromagnetic waves. J. T. MENDONÇA and F. DOVEIL 485

Nonlinear stability of doublets against axisymmetric resistive MHD modes. T. H. JENSEN and F. W. MCCLAIN 495

Lower-hybrid instability in current-carrying plasmas. J. E. WILLETT and H. MEHDIAN 527
Contents

Nonlinear interaction of spherical waves in a homogeneous isotropic plasma. J. C. Cerisier 539
Collisionless electrostatic interchange instabilities. S. P. Gary and M. F. Thomsen 551
Energy transfer in magnetized plasmas. L. Nocera 565
Author Index to Volume 28 575
