

Glasgow Mathematical Journal

CONTENTS

Edward L. Green and Idun Reiten , On the construction of ring extensions	1
David P. Sumner , Minimal line graphs	12
H. M. Srivastava and Rekha Panda , Some expansions of hypergeometric functions in series of hypergeometric functions	17
D. G. Fitz-Gerald , Divisibility in categories of a class which includes the category of binary relations	22
Hans Liebeck , A test for commutators	31
K. Rowlands , On a class of generalized functions	37
W. A. McCallum , The higher homotopy groups of the p -spun trefoil knot	44
S. Chowla and J. Friedlander , Class numbers and quadratic residues	47
B. Fisher , The convolution $x^{-1} * x^s$	53
N. R. Reilly and W. D. Munn , E -unitary congruences on inverse semigroups	57

GLASGOW MATHEMATICAL JOURNAL

The *Glasgow Mathematical Journal* is a continuation of the *Proceedings of the Glasgow Mathematical Association*, founded in 1952 by the late Professor T. M. MacRobert. It is published with the support of the University Court of the University of Glasgow. The *Glasgow Mathematical Journal* is published in Parts twice yearly, in January and July; two Parts complete a Volume of approximately 200 pages.

The prepaid subscription for each Volume is £3.00 in U.K., \$8.50 in U.S.A., post free. Single parts may be supplied at a cost of £1.55 in U.K., \$4.50 in U.S.A., net.

Copies may be ordered direct from the publishers or from any bookseller.

Information for Contributors

While the *Glasgow Mathematical Journal* is intended primarily for Pure Mathematics, papers on Applied Mathematics will also be accepted. Manuscripts from all parts of the world will be welcomed and given careful consideration.

Manuscripts, preferably typed, should be prepared so as to conform with the practice in current numbers of the *Journal*, especially with regard to line illustrations, references, tables and summaries. The name of the author and the date of the receipt of the manuscript will be printed under the title. Text figures must be suitable for line block reproduction, lettered in pencil, numbered, and separated from the text but allocated clearly to sections of the text.

References should be placed at the end of the paper, arranged and numbered in alphabetical order. In the text, reference numbers should be enclosed in square brackets and underlined, to distinguish them from formula numbers, which should be quoted in round brackets. The following particulars should be given, in the order indicated:

for references to books—*author, title, edition, place of publication, year of publication, page reference;*

for references to articles in periodicals—*author, title of article, short title of periodical, series no. (if any), volume no., year, pagination.*

A proof is supplied once in galley form, together with an Order Form for off-prints. Offprints are supplied free to the number of twenty-five; additional copies, if ordered prior to publication, will be supplied, at cost, at the request of the contributor. Excessive corrections may be charged to the author.

Manuscripts should be sent to:
