AN OUTLINE OF BRITISH CROP HUSBANDRY

By H. G. SANDERS

15s. net

A book on the technical detail of crop farming arranged according to operations, such as Rotations, Manuring, Cleaning, Tillage, the Seed Bed, Seed and Sowing, Cultivation, Harvest of Corn and of Root Crops, Costs. Practical bibliographies follow such chapters. This method of arrangement has the great advantage of leading to particular practice out of a study of general principles. The book is based upon usage in the chief arable area in England, and gives careful attention to traditional methods and the underlying reasons for them. It will, of course, be of great service to students of Agriculture, but it will certainly also appeal to farmers and those apprenticed to practical work on the land.
