HH 212

This molecular hydrogen image ($v=1-0$ S(1) line at $2.122\ \mu\text{m}$) shows the highly symmetric jet HH 212 in Orion, which emanates from a deeply embedded young source, IRAS 05413–0104, and drives an associated molecular outflow. The symmetric and periodic nature of the inner knots and outer bow shocks point to fluctuations at the source as their origin. The image covers 0.15×0.61 parsec at a distance of 450 pc, and has been rotated to place the jet vertically; its true position angle is 24 degrees E of N. Further details can be found in the paper by Zinnecker *et al.* in the poster proceedings of this meeting.

Data taken by Mark McCaughrean using MAGIC on the Calar Alto 3.5-m; 0.7 arcsec seeing; 14 minutes integration time; 1.1×4.6 arcmin field; continuum not subtracted.

TABLE OF CONTENTS

I. HERBIG-HARO OBJECTS, H₂ FLOWS AND RADIO JETS

50 Years of Herbig-Haro Research

B. Reipurth & S. Heathcote

1. The Discovery of HH Objects	3
2. The Early Years	5
3. Shock Physics, Kinematics and Multi-Wavelength Data	6
4. The HH 111 Jet	9
5. The HH 47 Jet	14

HST Observations of the L1551 IRS5 Jet

C.V.M. Fridlund, M. Hultgren & R. Liseau

1. Introduction & Background	19
2. HST Observations	22
3. Results	23
4. Conclusions	27

Giant Herbig-Haro Flows

J. Bally & D. Devine

1. Introduction	29
2. Observed Properties	33
3. Consequences of Parsec-Scale Herbig-Haro Flows	35

Herbig-Haro Objects in the Orion Nebula Region

C.R. O'Dell

1. Introduction	39
2. Structure of the Orion Nebula Region	41
3. The Two HH Object Systems in this Region	41
3.1 The North System	42
3.2 The South System	44
4. Discussion	45

Spectroscopic Properties of Herbig-Haro Flows

K.-H. Böhm & A.P. Goodson

1. Introduction	47
2. Some Unsolved Problems of Herbig-Haro Spectra	49
3. The Reliability of Quantitative Spectrophotometry in HH Objects and the Gas-Phase Abundances of Metals	56
4. Attempts to Explain UV and the $2\mu\text{m}$ IR Spectra of H_2	57
5. The Explanation of Line Profiles and Position-Velocity Diagrams	58
6. Future Studies of HH Spectra	60

Spectroscopic Signatures of Microjets

J. Solf

1. Introduction	63
2. Observations and Data Reduction Techniques	64
3. Results and Discussion	65
3.1 Spectroscopic Signatures of Microjets	65
3.2 The Case of DG Tau	67
3.2.1 General Remarks	67
3.2.2 Time Variability	69
3.2.3 The High-Velocity Gas Component (HVC)	69
3.2.4 The Low-Velocity Gas Component (LVC)	71
3.2.5 The Near-Rest-Velocity Gas Component (NRVC)	72

The Ionization State along the Beam of Herbig-Haro Jets

F. Bacciotti

1. Introduction	73
2. The Diagnostic Procedure	74
3. First Inspection of the HH 34 and HH 111 Jets	75
4. Analyses from Long-Slit Spectra	76
5. Conclusions	80

Thermal Radio Jets

L.F. Rodríguez

1. Introduction	83
2. Thermal Jets	84
2.1 How are Thermal Radio Jets Identified?	84
2.2 Advantages and Disadvantages	86
2.3 Are Thermal Jets Always Present in Outflow Regions?	88
3. Quadrupolar Outflows	88
3.1 L723	89

PREFACE

Herbig-Haro objects were discovered 50 years ago, and during this half century they have developed from being mysterious small nebulae to becoming an important phenomenon in star formation. Indeed, HH flows are now recognized not only as fascinating astrophysical laboratories involving shock physics and chemistry, hydrodynamics and radiation processes, but it has gradually been realized that HH flows hold essential clues to the birth and early evolution of low mass stars.

IAU Symposium No. 182 on *Herbig-Haro Flows and the Birth of Low Mass Stars* were held from January 20 to 24, 1997 in Chamonix in the french alps. A total of 178 researchers from 26 countries met to discuss our present level of understanding of Herbig-Haro flows and their relation to disk accretion events and T Tauri winds and other outflow phenomena like molecular outflows, embedded molecular hydrogen flows and radio jets. The present book contains the manuscripts from the oral contributions of the symposium. The poster papers were printed in a separate volume *Low Mass Star Formation – from Infall to Outflow*, edited by Fabien Malbet and Alain Castets, which was distributed at the beginning of the meeting. Together these two books document the vigorous state and the scientific appeal which research into Herbig-Haro flows and related issues in star formation enjoys today, observationally as well as theoretically.

To organize a major symposium like the present one requires the generous support of many people and organisations. We gratefully acknowledge the financial support of the International Astronomical Union, the Grenoble Observatory and its Astrophysics Laboratory (LAOG), the Institute for Millimetric Radioastronomy (IRAM), IBM, the Joseph Fourier University at Grenoble (UJF), the National Center for Scientific Research (CNRS), the French Ministry for Foreign Affairs (MAE), the regional (Région Rhône-Alpes) and local authorities (Conseil Général de Haute-Savoie and Mairie de Chamonix-Mont Blanc). The practical support provided by the Chamonix Tourist Office and the Grenoble Observatory was indispensable. Finally, the hard work of the Local and Scientific Organizing Committees contributed greatly to the success of the Symposium. To all, our warmest thanks.

Bo Reipurth and Claude Bertout

Scientific Organizing Committee

Claude Bertout (Co-chair), Institut d'Astrophysique de Paris, France
Karl-Heinz Böhm, University of Washington, Seattle, USA
Nuria Calvet, Centro de Investigaciones de Astronomia, Mérida, Venezuela
Max Camenzind, Landessternwarte Königstuhl, Heidelberg, Germany
John Dyson, The University of Leeds, England
Suzan Edwards, Smith College, Northampton, USA
George Herbig, Institute for Astronomy, Honolulu, USA
Alex Raga, Instituto de Astronomia, UNAM, México D.F., México
Bo Reipurth (Co-chair), European Southern Observatory, Santiago, Chile
Luis Felipe Rodríguez, Instituto de Astronomia, UNAM, México D.F., México

Local Organizing Committee

Alain Castets (Chair), Observatoire de Grenoble, France
Fabien Malbet, Observatoire de Grenoble, France
Françoise Bouillet, Observatoire de Grenoble, France
