Medicine
Books and Journals from Cambridge University Press

The Cambridge Medicine programme focuses its book publishing in a defined set of core clinical areas with our great strength in the clinical brain sciences. Other specialties of significant focus include reproductive medicine/obstetrics and gynaecology, anaesthesia and critical care, emergency medicine and pathology.

Our journals programme covers a broad spectrum of medical disciplines including emergency and disaster medicine, epidemiology and infectious diseases, biomedical science, genetics, nutrition, mental health and psychiatry, and neuroscience.

We partner with many learned societies including The Society for Healthcare Epidemiology of America, and the Neuroscience Education Institute, and the Royal College of Obstetricians and Gynaecologists.

Observation Medicine
Principles and Protocols
Sharon Mace, Department of Emergency Medicine, Cleveland Clinic, Ohio
April 2017 / 9781107022348 / Hardback / $105.00 / £64.99

Using sample administrative and clinical protocols that any hospital can use, this book gives a detailed account of how to set up and run an observation unit and reviews all medical conditions in which observation medicine may be beneficial. In addition to clinical topics such as improving patient outcomes and avoiding readmissions, it also includes practical topics such as design, staffing, and daily operations; fiscal aspects, such as coding, billing, and reimbursement; regulatory concerns, such as aligning case management and utilization review with observation nursing considerations; and more. The future of observation medicine, and how it can help solve the healthcare crisis from costs to access, is also discussed. Although based on US practices, this book is also applicable to an international audience, and contains instructions for implementing observation medicine in any setting or locale and in any type of hospital or other appropriate facility.

• Contains clinical protocols for diseases/conditions that may be managed by observation medicine, which is an up-and-coming solution to the crisis of costs and access to emergency healthcare
• Contains administrative protocols and covers the financial and business aspects of running an observation unit
• Offers an international perspective, with practical methods for implementing observation medicine in any location and with any type of resources, staffing, and education

Textbook of Disaster Psychiatry
Second Edition
Editors: Robert J. Ursano, Uniformed Services University
Carol S. Fullerton, Uniformed Services University of the Health Sciences, Maryland
Lars Weisaeth, Universitetet i Oslo
Beverley Raphael, Australian National University, Canberra
May 2017 / Hardback / 9781107138490 / $105.00 / £84.99

Covering both natural and man-made scenarios including war and terrorism, the Textbook of Disaster Psychiatry is a vital international reference for medical professionals, community leaders and disaster responders a decade after its initial publication. Spanning a decade of advances in disaster psychiatry, this new and updated second edition brings together the views of current international experts to offer a cutting-edge comprehensive review of the psychological, biological and social responses to disaster, in order to help prepare, react and aid effective recovery. Topics range from the epidemiology of disaster response, disaster ecology, the neurobiology of disaster exposure, to socio-cultural issues, early intervention and consultation-liaison care for injured victims. Faced with non-governmental organizations, workplace policies and the implications for public health planning at both an individual and community level are also addressed.

• The comprehensive examination of disaster and its impact gives the book both clinical and public health relevance
• The text has been updated to cover a decade of advances, leading to more effective approaches to preparation, treatment, intervention and therefore recovery
• Concepts and approaches are applied to worldwide needs, resulting in a text relevant to real life practice

### Parent-Reported Child Reactions to the September 11, 2001 World Trade Center Attacks (New York USA) in Relation to Parent Post-Disaster Psychopathology Three Years After the Event

Betty Pfeifferbaum, MD, JD; Zorica Simic, MS; Carol S. North, MD, MPE
Cover Artwork

*I May Be the Seed that Needed Fire to Free Me*, Acrylic Painting by Gayle Lorraine

Gayle Lorraine’s abstract compositions are intuitive expressions of emotion rather than visual realities. With knife and brush, fluid gesture, and precise, delicate overlays, she strives to create balance, beauty, depth, and motion in her black and white acrylic paintings.

Recent works come about from personal rebuilding; a journey of suffering, grief, acceptance, and hope. As a therapeutic necessity, her artwork took a new direction after the traumatic experience of witnessing the life she knew and loved, consumed by a 70,000-acre wildfire in 2015.

In nature, some seeds need fire in order to germinate. Many ecosystems have evolved with fire as an essential contributor to habitat vitality and renewal. *I May Be the Seed that Needed Fire to Free Me* is a symbolic reminder of the regenerative gift of change and its power to enhance future potential.

Gayle Lorraine’s work can be view at: www.gaylelorraine.com.
