

Review Papers for the Journal of Applied Probability

The Editorial Board would like to encourage the submission to the *Journal of Applied Probability* summarising and coordinating recent results in any of the fields of Applied Probability. The papers should be approximately 40–50 printed pages in length.

On acceptance of a Review Paper for publication in the *Journal*, the author will receive £stg 100 (\$280). The paper will then be distributed as a book in paperback form in the following series.

Methuen's Supplementary Review Series in Applied Probability

General Editor: M. S. BARLETT, M.A., D.SC., F.R.S.

Editor: J. Gani, D.I.C., PH.D.

This supplementary series will consist of the Review Papers from the *Journal of Applied Probability* in book form. There is always a lag between the publication of research papers in a field, and the advent of a book coordinating their results: it is this gap with the Review Series is designed to bridge. Consecutive volumes written in a simple expository style, will provide research workers and students of Applied Probability with up-to-date accounts of work done in their fields.

The series will deal with the applications of Probability Theory to the biological, physical, social and technological sciences. Volume 1 is concerned with storage theory, Volume 2 treats diffusion models in population genetics, and Volume 3 deals with group representations and applied probability.

Already Published

Volume 1. TIME-DEPENDENT RESULTS IN STORAGE THEORY
by N. U. Prabhu

Volume 2. DIFFUSION MODELS IN POPULATION GENETICS
by M. Kimura

In Press

Volume 3. GROUP REPRESENTATIONS AND APPLIED PROBABILITY
by E. J. Hannan

Orders for these should be made through your bookseller or direct from:

Methuen & Co. Ltd.

11 NEW FETTER LANE LONDON EC4

Subscription rates

Subscriptions (post free) for the annual volume of the *Journal* are:

U.S. \$12, £stg. 4.4.0, £A5.5.0, for libraries and institutions;

U.S. \$8, £stg. 2.16.0, £A3.12.0, for individuals belonging to a recognised scientific society.

Members of the London Mathematical Society should apply direct to the Secretary of the Society for copies of the *Journal*.

All enquiries about the *Journal*, as well as other subscriptions and orders for back numbers should be sent to the Editor-in-Chief. The price of back numbers is \$ 13.70, £ stg. 4. 17. 6, £A 6.2.6 per volume. Cheques, money orders, etc. should be made out to the *Journal of Applied Probability*; cheques on U.S., U.K. and Australian banks will be acceptable.

Notes for Contributors

It is a condition of publication in the *Journal of Applied Probability* that papers shall not previously have appeared elsewhere, and will not be reprinted without the written permission of the Trust. The copyright of all published papers shall be vested in the Trust. It is the general policy of the *Journal* not to accept for publication papers which cannot appear in print within 15 months of their date of submission. Authors will receive 100 reprints of their papers free, and joint authors 50 each, except for authors of review papers, who will receive 10 copies free. Additional reprints will be provided at cost.

Manuscripts should be written in English or French; manuscripts in other languages may be accepted by the Editors, but will appear (subject to the author's agreement) in English or French translation in the *Journal*.

It will be of help to the Editors if the following conventions are adopted:

a) The manuscript should be typewritten, using double spacing, on one side of the paper only. The original and a copy, may be submitted to any Editor; a duplicate of the covering letter should, however, be sent to the Editor-in-Chief.

b) References should be indicated in the text by the name of the author(s) and the date, thus: Feller (1961), and the full references listed at the end of the article in alphabetical order. Journal references should include the title of the article cited, the title of the journal (abbreviated in the style of the *International Journal of Abstracts: Statistical Theory and Method*) the volume, and inclusive page numbers. Book references should give the full title, the publisher, and the place of publication. For example:

Feller, W. (1961) A simple proof for renewal theorems. *Comm. Pure Appl. Math.* **14**, 285-293.

Robinson, E. A. (1959) *An Introduction to Infinitely Many Variates*. Griffin, London.

c) Type faces should be carefully distinguished on the manuscript using the following standard methods of marking:

Italic capitals (*T, I, R*) and lower case letters (*t, i, r*) should be underlined once, e.g.

T, I, R, t, i, r.

Bold-face capitals (**T, I, R**) and lower-case letters (**t, i, r**) should have a curly underline, e.g.

T, **I**, **R**, **t**, **i**, **r**.

Greek characters (α, β, φ) and script letters ($\mathcal{J}, \mathcal{I}, \mathcal{R}$) should be carefully drawn and identified when first used by a marginal note of the form ' α —lower case Greek alpha' or ' \mathcal{R} —script R'.

d) Indices and subscripts should be clearly distinguished, using the marking $\overset{4}{\wedge}$, $\underset{4}{\wedge}$ where necessary.

Authors will receive only first proofs for correction; charges will be made for excessive alteration to these.

Printed in Israel at the Jerusalem Academic Press, 40 Agrippas Road, Jerusalem.

Journal of Applied Probability

Volume 2

Number 1

June 1965

Review Paper

- E. J. HANNAN 1 Group representations and applied probability

Research Papers

- J. E. MOYAL 69 Incomplete discontinuous Markov processes
- M. SHINOZUKA 79 On the two sided barrier problem
- J. N. DARROCH 88 On quasi-stationary distributions in absorbing discrete-time finite Markov chains
AND E. SENETA
- T. N. BHARGAVA 101 On time changes in a digraph
- S. M. BERMAN 119 A renewal theoretic model for chronic disease statistics
- G. H. WEISS AND 129 A mathematical analysis of the stepping stone model
M. KIMURA of genetic correlation
- J. GANI AND 150 Some birth-death and mutation models for phage
G. F. YEO reproduction
- J. F. C. KINGMAN 162 Mean free paths in a convex reflecting region
- M. HOROWITZ 169 Probability of random paths across elementary geometrical shapes
- M. FOX 178 A simplified model for the formation, movement, and dissipation of fair weather cumulus clouds
- D. J. DALEY 186 General customer impatience in the queue $GI/G/1$
- C. R. HEATHCOTE 206 On the maximum of the queue $GI/M/1$
- S. ODOOM AND 215 A note on the equilibrium distribution of levels in
E. H. LLOYD a semi-infinite reservoir subject to Markovian inputs and unit withdrawals
