

GLACIOLOGICAL LITERATURE

THIS bi-annual list of glaciological literature aims to cover the scientific aspects of snow and ice in all parts of the world. Attention is drawn to the bibliographies in each number of the *Polar Record* (Cambridge), which aim to cover the significant work dealing with expeditions, research, equipment and conditions of living in the Polar regions. Both journals, however, deal with Polar literature having specific glaciological interest and with general matters of a practical nature such as snowcraft.

Readers will greatly assist the Editor by notifying him of their own, or any other, publication of glaciological interest.

- ADLAM, T. NAPIER. *Snow melting. Design, installation and control of systems for melting snow by hot water coils embedded beneath walks, roads, or other areas where snow is an obstruction or hazard.* New York, The Industrial Press, [c. 1950]. viii, 224 p.
- AHLMANN, HANS W. SON, and others. Scientific investigations in the Kebnekaise Massif, Swedish Lapland. I-IV. *Geografiska Annaler*, Årg. 33, Ht. 1-2, 1951, p. 90-120; Ht. 3-4, 1951, p. 121-43. [General outline 1946-51; morphology and cartography by H. F. Johanson and E. Waxnerud respectively.]
