EDITORIAL BOARD
M. Rassmussen (Imperial College London)
D. Ruelle (IHES, Bures-sur-Yvette)
M. Simon (University of Alabama, Birmingham)
S. van Strien (Imperial College London)
M. Tsujii (Kyushu University)
A. M. Vershik (Steklov Mathematical Institute, St. Petersburg)
M. Viana (IMPA, Rio de Janeiro)
T. Ward (University of Leeds)
B. Weiss (Hebrew University of Jerusalem)
A. Wilkinson (University of Chicago)

Ergodic Theory and Dynamical Systems provides a focus for this important and rapidly developing area of mathematics and an opportunity to bring together many major contributors in the field which are, at the moment, scattered over a large number of non-specialist periodicals. Dynamical methods have proved to be a powerful unifying force in mathematics in recent decades, and they are now beginning to be felt in allied subjects such as physics and biology. Ergodic Theory and Dynamical Systems acts as a forum for central problems of differential geometry, number theory, operator algebras, topological, differential and symmetric dynamics, and celestial and statistical mechanics. Expository survey articles and conference proceedings will be included from time to time and reviews of relevant books will also be published.

Copyng: This journal is registered with the Copyright Clearance Center, 22 Rosewood Drive, Danvers, MA 01923, USA (www.copyright.com). Organizations in the USA who are also registered with CCC may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to CCC. This consent does not extend to multiple copying for promotional or commercial purposes. Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions. For all other use, permission should be sought from Cambridge or the American branch of Cambridge University Press.

Internet Access: This journal can be found on Cambridge Core at cambridge.org/etds. For further information on other Press titles visit cambridge.org/journals.

Subscriptions: Ergodic Theory and Dynamical Systems (ISSN 0143-3857) is published monthly. The subscription price (excluding VAT) of volume 39, 2019 which includes print and electronic access, is £1706.00 (US$2983.00 in USA, Canada and Mexico). The electronic-only price available to institutional subscribers is £1456.00 (£2355.00 in USA, Canada and Mexico). Single parts cost £246.00 net (£342.00 in USA, Canada and Mexico). Prices include delivery by air where appropriate. Members of the London Mathematical Society and American Mathematical Society may subscribe for £357.00 (£6618.00). Twelve parts from a volume. EU subscribers (outside the UK) who are not registered for VAT should add VAT at their country’s rate. VAT registered subscribers should provide their VAT registration number. Orders, which must be accompanied by payment, may be sent to a book-seller, subscription agent or direct to the publishers: Cambridge University Press, Journals Fulfillment Department, University Printing House, Shaftesbury Road, Cambridge CB2 8BS or, in the USA, Canada and Mexico, Cambridge University Press, Journals Fulfillment Department, One Liberty Plaza, Floor 20, New York, NY 10006, USA. Japanese prices for institutions are available from Kinokuniya Company Ltd, P.O. Box 55, Chitose, Tokyo 156, Japan.

INSTRUCTIONS FOR CONTRIBUTORS

Editorial Policy
The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

Submission of manuscripts
Manuscripts should be submitted via the website: http://mc.manuscriptcentral.com/etds. Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in \\LaTeX using the ETDS \LaTeX class file. Papers that use this class file will be processed more efficiently. \LaTeX source code is available via anonymous ftp from the Cambridge University Press site ftp:cup.cam.ac.uk in the directory pub/latex/archive/journals/latex/etds.cls. In case of difficulties with these files, please contact etds@universe-setting.co.uk or the Journal editorial office at etds@maths.warwick.ac.uk. Alternatively, authors may use ‘article’ style. On acceptance of a paper, authors should upload the \LaTeX source code including the figures (line figures only) and all author-defined macro and style files, together with a pdf produced using the same file, via the submission site http://mc.manuscriptcentral.com/etds. The publisher reserves the right to typeset any article by conventional means if the author’s \LaTeX code presents problems in production.

Manuscript
Papers should be typed with generous margins. The pages must be numbered.

The first page should give the title, the author’s name and institution, and a short abstract intelligible to mathematicians. The title, while brief, must be informative (e.g. ‘A new proof of the ergodic theorem’, whereas ‘Some applications of a theorem of Birkhoff’ would be useless).

Notation
Avoid abbreviations such as Thm, Prop, Eq., iff. In the text do not use symbols such as $\forall, \exists, \Rightarrow$. Fractions are generally best expressed as a solidus. Consecutive exponents like $exp\left( x^2 sin^2 \theta \right)$ should be shown in this way and not in this way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, ‘from (7)’.

If an author wishes to mark the end of the proof of a theorem, the sign $\Box$ may be used.

Footnotes should be avoided.

Figures
Graphics should be prepared to professional standards, preferably using Postscript or \LaTeX\ drawing facilities. Each figure text must be numbered as Figure 1, Figure 2, . . . and its intended position clearly indicated in the manuscript. Figures should be used sparingly and only when they greatly clarify the exposition. The preferred resolutions for submission of electronic artwork are: half-tone images 300 dpi, line tone 600 dpi, bitmap 1200 dpi.

Tables
Tables should be numbered (above the table) as Table 1, Table 2, . . . and indicate the position of each in the text as for figures.

References
References should be collected at the end of the paper numbered in alphabetical order of the author’s names or by order of citation. Include in the list of references only those works that are cited. For the style of references please consult recent issues of the journal. A reference to a book should give the title, in italics, and then in roman type the publisher’s name and the place and year of publication: [4] J. E. Littlewood. The ‘pits effect’ for functions in the unit circle. Linear Operators A. Avila (Université Paris VI) M. Rasmussen (Imperial College London) D. Ruelle (IHES, Bures-sur-Yvette) M. Simon (University of Alabama, Birmingham) S. van Strien (Imperial College London) M. Tsujii (Kyushu University) A. M. Vershik (Steklov Mathematical Institute, St. Petersburg) M. Viana (IMPA, Rio de Janeiro) T. Ward (University of Leeds) B. Weiss (Hebrew University of Jerusalem) A. Wilkinson (University of Chicago)
