

CNMNC Newsletter

IMA Commission on New Minerals, Nomenclature and Classification (CNMNC) – Newsletter 85

Ferdinando Bosi (Chairman, CNMNC)¹, Frédéric Hatert (Vice-Chairman, CNMNC)², Marco Pasero (Vice-Chairman, CNMNC)³ and Stuart J. Mills (Secretary, CNMNC)⁴

¹Dipartimento di Scienze della Terra, Sapienza Università di Roma, Piazzale Aldo Moro 5, Roma, Italy – ferdinando.bosi@uniroma1.it; ²Laboratoire de Minéralogie et de Cristallographie, Université de Liège, Bâtiment B18, Sart Tilman, Liège, Belgium – fhatert@uliege.be; ³Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, Pisa, Italy – marco.pasero@unipi.it and ⁴Gallery of Natural Art, Richardson, TX, USA – stuart@irocks.com

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula (ideal formula)

Mineral symbol

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the powder X-ray diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's website.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

New mineral proposals approved in April 2025

IMA No. 2024-085

Arzamastsevite

$\text{K}_6\text{Al}_5\text{Si}_6\text{O}_{20}(\text{OH})_4\text{Cl}$

Azm

Parguiv Mountain, Lovozero alkaline massif, Kola Peninsula, Russia (67°47'22.4'' N, 34°35'10'' E)

Julia A. Mikhailova*, Yakov A. Pakhomovsky, Ekaterina A. Selivanova, Andrey A. Zolotarev, Sergey M. Aksenov and Vladimir N. Bocharov

*E-mail: j.mikhailova@ksc.ru

Chemically and structurally related to kalborsite

Tetragonal: $I4_2m$; structure determined

$a = 9.8280(5)$, $c = 13.134(1)$ Å
6.947(24), 3.478(35), 3.286(26), 3.110(44), 3.075(100),
2.971(84), 2.813(73), 2.732(28),

Type material is deposited in the collections of the Geological and the Mineralogical Museum of the Geological Institute, Kola Science Centre of the Russian Academy of Sciences, 14 Fersman Street, Apatity 184209, Russia, catalogue number GIM 7986

Nomenclature/classification proposals approved in May 2025

Nomenclature scheme for the aeschynite group

(Zeyang Zhu, Can Rao, Hong Yu, Zhenyu Chen, Bin Wu, Rucheng Wang, and Denghong Wang)

A nomenclature scheme for the aeschynite group has been approved, and end-member formulae were established for some minerals. The aeschynite group comprises aeschynite-(Ce), redefined as Ce(TiNb)O₆, aeschynite-(Nd), redefined as Nd(TiNb)O₆, aeschynite-(Y), redefined as Y(TiNb)O₆, rynersonite, CaTa₂O₆, tantaloeschynite-(Ce), Ce(TiTa)O₆, tantaloeschynite-(Y), redefined as Y(TiTa)O₆, and vigezzite, redefined as CaNb₂O₆.

Nioboeschynite-(Ce) and nioboeschynite-(Y) have been found to be equivalent to aeschynite-(Ce) and aeschynite-(Y), respectively. Therefore, both nioboeschynite-(Ce) and nioboeschynite-(Y) have been discredited.

Nomenclature scheme for the monazite supergroup

(Pavel Uher, Frédéric Hatert, Martin Ondrejka, Peter Bačík, Jiří Sejkora, Radek Škoda, and Martin Števkó)

The monazite supergroup has been established. Phosphates (monazite-(Ce), monazite-(La), monazite-(Nd), monazite-(Sm), monazite-(Gd), and cheralite) and arsenates (gasparite-(Ce), gasparite-(La), and rooseveltite) belong to the monazite group, whilst silicates (huttonite) and chromates (crocoite) are individual members of the supergroup.
