**Indian mental health legislation**

Sir,

I read with interest the critical review by Kala Kala on mental health legislation in contemporary India in the July issue of International Psychiatry (pp. 69–71). Kala & Kala mention various shortcomings in the Indian Mental Health Act 1987. As a psychiatrist who has worked in both India and the UK (and thus under the Mental Health Acts of both countries) I would like to draw attention to some other gaps which I feel are as important.

First, the Indian Act does not mention involuntary medication at all. Involuntary medication is not synonymous with involuntary admission. Both voluntary and involuntary patients could in principle insist on having only psychological interventions and refuse all psychotropic medication. The powers and duties of a psychiatrist in such cases remain undefined by the Act. The Act similarly omits mention of electroconvulsive therapy. In a wider sense, it is not clear whether involuntary admissions (admission under special circumstances, admission under reception order) give psychiatrists the right to treat patients against their will.

Second, the Act does not define the circumstances under which involuntary admissions are advisable. A psychiatrist and two medical practitioners agreeing that a patient has a mental illness and needs treatment is not enough. Treatment for psychiatric illnesses is also possible in the community. Where do we draw a line?

Third, the Act attempts to define ‘psychiatrist’ and ‘medical practitioner’ early in its text. It is not absolutely necessary to have a psychiatric qualification to be defined as a ‘psychiatrist’ under the Act. A medical practitioner with sufficient experience in psychiatry can also be considered a ‘psychiatrist’ for the purposes of the Act. What constitutes ‘sufficient experience’ for the purposes of the Act again remains undefined.

Fourth, the Act does not include prescribed forms for involuntary admissions. Without prescribed forms, any kind of uniform, standardised practice throughout a country with remains undefined.

Fifth, the Act does not mention the role of psychiatrists in the case of prisoners who are mentally ill. They are a large population who remain by the most part neglected by both the criminal justice system and the health services in India. In my experience, psychiatrists are involved only to the extent of giving reports about whether a person is ‘fit to stand trial’. While working in India, I often wondered what happened to prisoners who became mentally ill in prison, or people who were not convicted after making a successful insanity plea but remained dangerous to society because of their psychopathology.

India’s resources are limited but that is no excuse to stop planning, to look for what remains missing in this vital piece of legislation. Unless we plan, we do not know what kind of resources we need or whether we can modify and use an existing infrastructure. It is time to act.

**Working conditions in Russia**

Sir,

Working conditions can have a dramatic impact on the training of psychiatrists. We write about the stark contrast between those in Russia and the UK.

Working conditions for doctors in Russia have deteriorated since the collapse of the USSR. Healthcare in the state sector is free for patients but under-funded. Psychiatrists in Russia work under the burden of a huge degree of stigma, both from within the medical profession and from the general public. This stems from the abuse of psychiatry in the former USSR for political purposes.

Psychiatrists in Russia earn much less than those in the UK. Trainees working in a state institution earn approximately £70 a month (£50), compared with between £2000 and £3000 a month for trainees in the UK. A Russian psychiatrist working in the state sector who has been qualified for 5 years and works extra night shifts earns £150 a month (£100). Salaries in the private sector are much higher, with a professor earning between £2000 and £3000 (£1350–£2000), although this is still less than a trainee in the UK.

Some psychiatrists in Russia earn less than non-professional workers; for example, security guards earn around £500 a month (£350). Although the wages are substantially lower than in the UK, the cost of living is similar. A month’s rent for a single-room apartment in Moscow is on average €800 (£550), which is comparable to London prices. Clearly, this makes it impossible for trainees to survive on their salary and the co-author personally knows many who are supported by their families and work extra shifts and have second jobs. It is noticeable that many relatives recognise the poor working conditions to offer doctors money to thank them for good care and treatment.

In Russia, psychiatric training lasts for up to 3 years (1 year of inpatient care and 2 years of outpatient training) compared with the 6 years of the new run-through training in the UK. In contrast to the current concerns in the UK over the number of training posts, there are plenty of posts for psychiatric trainees in Russia. This is because training is of a popular job, owing to the low salary, and for the same reason there are many specialist jobs available when training is complete.

Other medical specialties, such as obstetrics and dermatology, are more popular in Russia. In Russia, psychiatry training lasts for up to 3 years (1 year of inpatient care and 2 years of outpatient training) compared with the 6 years of the new run-through training in the UK. In contrast to the current concerns in the UK over the number of training posts, there are plenty of posts for psychiatric trainees in Russia. This is because training is of a popular job, owing to the low salary, and for the same reason there are many specialist jobs available when training is complete. Other medical specialties, such as obstetrics and dermatology, are more popular in Russia.

Trainees in Russia have shorter working hours than their colleagues in the UK. They work approximately 40 hours a week compared with 56 hours a week in the UK. They are also entitled to more annual leave, nearly 2 months compared with 5 weeks in the UK.

We hope that increasing cooperation between European psychiatric associations will lead to an improvement in both training and working conditions for psychiatrists in Russia.

**Subscriptions**

International Psychiatry is published four times a year. Non-members of the College should contact: Publications Subscriptions Department, Maney Publishing, Suite 1C, Joseph’s Well, Hanover Walk, Leeds LS1 1AB, UK tel: +44 (0)113 243 2800, fax: +44 (0)113 366 8178; email: subscriptions@maney.co.uk

For subscriptions in North America please contact: Maney Publishing North America, 875 Massachusetts Avenue, 7th Floor, Cambridge, MA 02139, USA tel: 866 297 5154 (toll free); fax: 617 354 6875; email: maney@maneyusa.com

Annual subscription rates for 2007 (four issues, post free) are £66 (US$105). Single issues are £8.00 (US$14.40), post free.

**Notice to contributors**

International Psychiatry publishes original and scientific articles, country profiles and points of view, dealing with the policy and promotion of mental health, the administration and management of mental health services, and training in psychiatry around the world. Correspondence as well as items for the news and notes column will also be considered for publication.

Manuscripts for publication must be submitted electronically to the Editor (highdose@nghms.ac.uk), with a copy sent to the Secretariat (ips@rcpsych.ac.uk). The maximum length for papers is 1500 words; correspondents should be under 500 words. The Harvard system of referencing should be used.

A declaration of interest must be given and should list fees and grants from, employment by, consultancy for, shared ownership in, or any close relationship with, any organisation whose interests, financial or otherwise, may be affected by the publication of your submission. This pertains to all the authors.

Manuscripts accepted for publication are copy-edited to improve readability and to ensure conformity with house style. Contributions are accepted for publication on the condition that their substance has not been published or submitted elsewhere.

**About our peer-review process**

All articles submitted as ‘special papers’ will be peer-reviewed to ensure that their content, length and structure are appropriate for the journal. Although not all papers will be accepted for publication, our peer-review process is intended to assist our authors in producing articles for worldwide dissemination. Wherever possible, our expert panel of assessors will help authors to improve their papers to maximise their impact when published.

**Mission of international Psychiatry**

The journal is intended primarily as a platform for authors from low- and middle-income countries, sometimes writing in partnership with colleagues elsewhere. Submissions from authors from International Divisions of the Royal College of Psychiatrists are particularly encouraged.
