Biotechnology and bioethics: what it's all about

Questions to stimulate reflection

What is the difference between biotechnology's being *interdisciplinary* and *multidisciplinary*?

Can you think of a few of the advantages and disadvantages to be derived from biotechnology's being interdisciplinary?

What do you think might be advantageous and disadvantageous about biotechnology's being multidisciplinary?

How do advances in biotechnology generate ethical problems?

What do you think might be the difference between an *ethical* problem and a *social* problem?

Can you think of two examples each of (1) an ethical problem generated by biotechnology, and (2) a social problem generated by biotechnology?
