PSYCHIATRIC AND BEHAVIORAL DISORDERS IN INTELLECTUAL AND DEVELOPMENTAL DISABILITIES

Third edition

Edited by Colin Hemmings
Maudsley Hospital, London

and Nick Bouras
Institute of Psychiatry, Psychology and Neuroscience, King’s College London

Fully revised, this new edition reviews the most up-to-date and clinically relevant information on the mental health and behavioral problems of people with intellectual, developmental and learning disabilities, also previously known as mental retardation. Providing the latest evidence base from the literature and embracing clinical experience, it covers the essential facts and concepts relating to coexisting medical and psychiatric disorders, with new and updated chapters on mental health and epilepsy, schizophrenia spectrum disorders, personality disorders, and mental health problems in people with autism and related disorders. The disorder-based chapters are complemented by chapters on carer and family perspectives, possible future developments and contributions highlighting the principles of assessment, management and services from global and historical perspectives. This is essential hands-on practical advice for psychiatrists, psychologists and all other mental health professionals including nurses, therapists, social workers, managers, service providers and commissioners.

WHY IT WILL SELL

• Provides practical, clinically relevant advice highlighting the principles of assessment and management, as well as the implications for services

• Relevant to all members of the mental health, developmental and intellectual disabilities teams and identifying research trends and possible future developments

• Written by an international, multidisciplinary team of experts, providing a global perspective

COGNITIVE IMPAIRMENT IN MAJOR DEPRESSIVE DISORDER

Clinical Relevance, Biological Substrates, and Treatment Opportunities

Edited by Roger S. McIntyre
University of Toronto

and Danielle S. Cha
University of Toronto

Major depressive disorder (MDD) is the leading cause of disability globally in both developed and developing nations. The staggering economic costs attributable to MDD are largely a consequence of impairment in role function. Evidence indicates that disturbance in the domain of cognitive function in individuals with MDD is the principal determinant of health outcome. This is the first book to comprehensively explore the domain of cognition in MDD. The literature describing cognitive dysfunction is reviewed with particular focus on clinical determinants, pathophysiology and causative factors. The patient subpopulations most susceptible are defined. A summary of contemporary assessment tools for research and clinical purposes is provided. Multimodality treatments and prevention strategies are described. This book is an invaluable resource for psychiatrists, neuropsychologists and other members of the mental health team, as well as for policy makers, vocation rehabilitation experts, disability providers and other stakeholders interested in improving health outcomes in MDD.

CONTENTS

Preface; Part I. Clinical Relevance of Cognitive Dysfunction in Major Depressive Disorder; Part II. Underlying Biological Substrates Associated with Cognitive Dysfunction in Major Depressive Disorder; Part III. Evaluating Cognitive Dysfunction in Major Depressive Disorder; Part IV. Treatment Opportunities for Ameliorating Cognitive Dysfunction in Major Depressive Disorder; Index.

Parental Psychiatric Disorder

Distressed Parents and their Families

Third edition

Edited by Andrea Reupert
Monash University, Victoria

Joanne Nicholson
Dartmouth Psychiatric Research Center

Daryl Maybery
Monash University, Victoria

Michael Göpfert
University of Liverpool

and Mary V. Seeman
University of Toronto

Parental Psychiatric Disorder presents an innovative approach to thinking about and working with families where a parent has a mental illness. With 30 new chapters from an internationally renowned author team, this new edition presents the current state of knowledge in this critically important field. Issues around prevalence, stigma and systems theory provide a foundation for the book, which offers new paradigms for understanding mental illness in families. The impact of various parental psychiatric disorders on children and family relationships are summarized, including coverage of schizophrenia, depression, anxiety, substance abuse disorders, eating disorders, personality disorders and trauma. Multiple innovative interventions are outlined, targeting children, parents and families, as well as strategies that foster workforce and organisational development. Incorporating different theoretical frameworks, the book enhances understanding of the dimensions of psychiatric disorders from a multigenerational perspective, making this an invaluable text for students, researchers and clinicians from many mental health disciplines.

CONTENTS

Preface; Part I. Fundamental Issues; Part II. Comprehensive Assessment; Part III. Specific Disorders: The Impact on Children, Parenting and Family Relationships; Part IV. Child, Parent and Family Interventions; Part V. Building Workforce, Organisational and Community Capacity; Index.

ADDITIONAL INFORMATION

Level: professionals, medical specialists/consultants

Why It Will Sell

- Covers a wide range of parental psychiatric disorders and the underlying processes that suggest how a parent’s mental illness might impact on children and vice versa
- Provides an overview of the different theoretical frameworks that identify the processes involved in the transmission and alleviation of mental illness in families
- Includes numerous case studies that describe how students and experts have worked with individuals, families and organisations to enable learning from mistakes and successes

ANESTHESIA

DECISION-MAKING IN ORTHOPEDIC AND REGIONAL ANESTHESIOLOGY

A Case-Based Approach

Edited by Michael R. Anderson
The Icahn School of Medicine, Mount Sinai, New York

Sylvia H. Wilson
Medical University of South Carolina

and Meg A. Rosenblatt
The Icahn School of Medicine, Mount Sinai, New York

In light of evolving techniques and strategies for increasingly complex orthopedic procedures, this accessible guide to patient management outlines the considerations involved in selecting the most suitable anesthetic for both common and complex clinical scenarios. Chapters cover a multitude of clinical presentations and procedures, ranging from orthopedic trauma to total joint replacement, outpatient hand procedures and regional anesthetic placement in patients with pre-existing conditions. Each chapter discusses and evaluates multiple approaches, accompanied by a review of the current literature. Abundant case scenarios of patients undergoing orthopedic surgical or regional anesthesia provide a handy framework for specialists and consultants, as well as an invaluable guide for trainees in anesthesia, regional anesthesia and emergency medicine.

CONTENTS

WHY IT WILL SELL

- Reviews common clinical scenarios and surgical procedures to address real-life medical conditions and the considerations for clinical staff in selecting the most suitable anesthetic method
- Follows a concise and accessible structure in describing techniques, discussing different considerations and perspectives, and presenting benefits and drawbacks
- Fully up to date with the latest literature and techniques

ULTRASOUND IN ANESTHESIA, CRITICAL CARE, AND PAIN MANAGEMENT
Second edition

Edited by Graham Arthurs
Maelor Hospital, Wrexham
and Barry Nicholls
Musgrove Park Hospital, Taunton

This up-to-date, revised edition on ultrasound in anesthesia has now been expanded to cover the important areas of pain management and critical care, and includes the new Royal College of Anaesthetists’ guidelines for using ultrasound in anesthesia and intensive care. A comprehensive, practical guide, it explains the benefits of ultrasound for all essential practices, ranging from vascular access and local anesthetic blocks in adults and children, to cardiac assessment, trauma and intensive care practice, pain management and more. Additional resources include over 100 still and video clips, allowing the reader to view ultrasound sequences while reading the relevant chapter. Written by ultrasound experts, this is the perfect introductory text for medical consultants and any trainee or medical student who needs a step-by-step guide to how ultrasound works, how to use it themselves, how to get the best images and when to ask a sonographer for help.

ADDITIONAL INFORMATION
Level: medical specialists/consultants, specialist medical trainees

WHY IT WILL SELL
• Provides a practical approach to the use of ultrasound, enabling medical consultants as well as medical trainees to use ultrasound in their own practice
• Heavily illustrated with both still and video clips, to help the reader to recognise normal and abnormal patterns in the tissue being examined and to train eye-hand skills required for ultrasound usage
• Includes diagrams to aid pattern recognition of the relevant anatomical features

Cardiopulmonary Bypass

Second edition

Edited by Sunit Ghosh
Papworth Hospital, Cambridge

Florian Falter
Papworth Hospital, Cambridge

and Albert C. Perrino, Jr
Yale University, Connecticut

Cardiopulmonary Bypass, 2nd edition, offers a complete introduction to this specialist technique for medical and technical personnel involved in extracorporeal cardiopulmonary support. A clinically based overview of the subject is provided and updated chapters incorporate the most current developments in the field. Introductory chapters cover equipment and preparation of the cardiopulmonary bypass machine, safety and monitoring, routine conduct of bypass, and the process of weaning from mechanical to physiological circulation. Specialist chapters on mechanical support, ECMO, special surgical procedures, blood conservation techniques, and particular medical conditions that affect the conduct of cardiopulmonary bypass are also included. This new edition includes self-assessment multiple choice questions at the end of each chapter, allowing readers to test their own understanding of the material. Written and edited by specialists from leading cardiac centres in the UK and USA, this is an invaluable resource for clinical perfusion scientists, cardiac surgeons and cardiothoracic anaesthetists in training.

CORE TOPICS IN OBSTETRIC ANAESTHESIA

Edited by Kirsty MacLennan
Manchester University Hospitals NHS Trust

Katherine O’Brien
Manchester University Hospitals NHS Trust

and William MacNab
Manchester University Hospitals NHS Trust

This new addition to the highly successful Core Topics in Anaesthesia series provides a clinically relevant text for both trainees and consultants, covering the entire sub-speciality of obstetric anaesthesia. In-depth coverage of pregnancy-related physiology and pharmacology makes this book an excellent revision tool for basic science examinations. It is also a troubleshooting guide for anaesthetists when managing parturients suffering with concurrent medical conditions including obesity, sepsis, hypertensive, renal, respiratory, neurological, haematological and endocrine diseases. Chapters provide recommended management plans for specific conditions such as HIV and neuropraxia following regional anaesthesia, and include algorithms to guide clinical decision-making. Guidance on the required infrastructure for setting up services such as antenatal clinics is also included. Experts in their fields have contributed sections including allergy testing and immunology, the immunocompromised parturient, and maternal collapse. This practical resource will serve as a survival guide for all those caring for parturients on the delivery suite.

October 2015
246 x 189 mm  248pp
32 b/w illus. 9 colour illus. 74 tables
978-1-107-02849-4  Hardback
£59.99

WHY IT WILL SELL

• Includes clear anaesthetic considerations for patients with complex co-morbidities and recommended management plans for specific conditions

• Provides guidance on the required infrastructure for setting up services such as antenatal clinics and suggestions for multidisciplinary team education (not addressed in other similar texts)

• An international team of expert obstetric anaesthetists and intensivists have contributed to this up-to-date reference

CONTENTS

Preface; Part I. Basic Science, Epidemiology and Service Organisation; Part II. Obstetric Aspects; Part III. Provision of Anaesthesia; Part IV. Medical Conditions in Pregnancy; Part V. Postpartum Complications and Obstetric Emergencies; Part VI. Service Organisation; Index.

ULTRASOUND-GUIDED REGIONAL ANESTHESIA IN CHILDREN
A Practical Guide

Edited by Stephen MannionGabrielle Iohom
University College CorkUniversity College Cork

Christophe DadureMark Reisbig
Hôpital Lapeyronie, Montpellier, FranceCreighton-Alegent University Medical Center,

and Arjunan Ganesh
Children's Hospital of Philadelphia

Ultrasound has revolutionized the practice of regional anesthesia, yet there remains a paucity of good resources on ultrasound-guided regional anesthesia in children. This book offers a much-needed practical guide to all the major ultrasound-guided blocks in pediatric patients, including neuraxial, truncal, upper and lower limb blocks. The core principles of good clinical practice in regional anesthesia are described and discussed, including the pharmacology of local anesthetics in children, the performance of regional anesthesia, the management of complications, and the clinical anatomy of each block. Every block chapter provides both a ‘how to’ section and also a comprehensive literature review, with an up-to-date and relevant bibliography for reference and further reading. Chapters are illustrated with unique anatomical images and detailed descriptions. Both trainee and experienced anesthesiologists will find this an essential resource for the safe and effective performance of modern regional anesthesia in children.

WHY IT WILL SELL

• Includes a comprehensive literature review for all nerve blocks described, enabling the reader to understand the indications, evidence base and clinical application of the particular nerve block

• Detailed chapters on underlying principles provide the reader with the core foundation knowledge necessary for safe practice, including detailed anatomical descriptions, how to avoid complications and how to manage them should they occur

• Numerous images and annotated illustrations allow the reader to see what the ultrasound images look like in clinical practice, with the additional benefit of labeled sonoanatomy for learning purposes

PRACTICAL AMBULATORY ANESTHESIA

Edited by Johan Raeder
Universitetet i Oslo

and Richard D. Urman
Harvard Medical School

Practical Ambulatory Anesthesia covers all aspects of sedation, anesthesia, and pain relief for patients undergoing day (ambulatory) surgery. Written and edited by leading clinical anesthesiologists from the USA and Europe, it provides clear guidance on how to handle particular patients in particular situations. Comprehensive in scope, each chapter summarizes major studies and review papers, followed by practical advice based on the authors’ and editors’ clinical and scientific expertise. This combination of authoritative evidence-based guidance and personal advice ensures the reader benefits from the latest scientific knowledge and the authors’ wealth of experience. Chapters discuss how to plan, equip and staff an ambulatory unit, pharmacology, key concepts of ambulatory care, pre- and post-operative issues, quality assurance, and current controversies. There are also dedicated chapters for topics including regional anesthesia for ambulatory surgery and pediatric ambulatory anesthesia. This text provides a much-needed comprehensive and evidence-based guide for clinical anesthesiologists.

WHY IT WILL SELL

- Summarizes the most recent clinical and administrative developments in ambulatory anesthesia
- This ‘how to’ book is practical and to the point
- Includes practical ‘recipes’ for anesthesia involving commonly performed procedures

Emergencies Medicine

Emergency Radiology Coffee Case Book

Case-Oriented Fast Focused Effective Education

Edited by Bharti Khurana
Brigham and Women’s Hospital

Jacob Mandell Asha Sarma
and Stephen Ledbetter
Brigham and Women’s Hospital

Emergency radiology requires consistent, timely, and accurate imaging interpretation with the rapid application of clinical knowledge across many areas of radiology practice that have traditionally been fragmented by organ system or modality divisions. This text unifies this body of knowledge into an educational resource capturing the core competencies required of an emergency radiologist. This book of 85 index cases is organized by clinical presentations that simulate real-life radiology practice in the emergency department. Companion cases spanning the differential diagnoses and spectrum of disease provide hundreds more examples for a fast, focused and effective education called COFFEE (Case-Oriented Fast Focused Effective Education). This text can serve as a ‘go to’ resource for radiologists, as well as any other physicians working in the emergency department. It will be an excellent companion for radiologists preparing for initial board certification or re-certification by the American Board of Radiology.

Contents

Additional Information

Level: medical specialists/consultants, specialist medical trainees

Why It Will Sell

• 85 index cases are accompanied by hundreds more that represent the differential diagnoses and spectrum of disease for the index case
• A brief self-assessment and focused summary of major teaching points accompany each index case, accelerating the learning process
• Numerous instructional figures and illustrations facilitate a better understanding of the relevant anatomy and pathology

KOENIG AND SCHULTZ’S DISASTER MEDICINE

Comprehensive Principles and Practice

Second edition

Edited by Kristi L. Koenig
Department of Emergency Medicine, University of California Irvine, Orange

and Carl H. Schultz
Department of Emergency Medicine, University of California Irvine, Orange

As societies become more complex and interconnected, the global risk for catastrophic disasters is increasing. Demand for expertise to mitigate the human suffering and damage these events cause is also high. A new field of disaster medicine is emerging, offering innovative approaches to optimize disaster management. Much of the information needed to create the foundation for this growing specialty is not objectively described or is scattered among multiple different sources. This definitive work brings together a coherent and comprehensive collection of scientific observations and evidence-based recommendations with expert contributors from around the globe. This book identifies essential subject matter, clarifies nomenclature, and outlines necessary areas of proficiency for healthcare professionals handling mass casualty crises. It also describes in-depth strategies for the rapid diagnosis and treatment of victims suffering from blast injuries or exposure to chemical, biological, and radiological agents.

October 2015
253 x 203 mm 720pp 172 colour illus. 144 tables
978-1-107-04075-5 Hardback c. £145.00

WHY IT WILL SELL

- A fresh new approach to disaster preparedness and response, written for both emergency physicians and nurses
- Covers a wide range of disaster situations, with strategies for rapid diagnosis and treatment of victims, as well as scene management
- Contributed by experts from all over the world, supplemented with photos and diagrams of each aspect of disaster response

The emergency department is a place of challenging ethical dilemmas and little time and resources to solve them. Ethical Dilemmas in Emergency Medicine provides invaluable information, perspectives, and solutions to common ethical dilemmas in emergency medicine. It addresses important topics seen in the emergency department, including medicolegal issues, triage, privacy and confidentiality, social media, difficult patients, minors, research, patient safety, disasters, suicide, and end of life issues. The accompanying educational modules provide a unique educational opportunity for resident and staff education on ethical issues in emergency medicine. Featuring twenty-three case-based discussions of ethical dilemmas in emergency medicine along with numerous multimedia resources, including media presentations, case based discussions, and multiple choice questions, this book is an invaluable resource for residents in training as well as practicing physicians.

SPORTS MEDICINE FOR THE EMERGENCY PHYSICIAN

A Practical Handbook

Edited by Anna L. Waterbrook

University of Arizona

Written by sports-trained emergency physicians Sports Medicine for the Emergency Physician: A Practical Handbook is the only resource of its kind, created specifically for the emergency medicine provider. It is designed to be used as a reference tool, and includes high-yield physical exam skills and key management of sport injuries in the emergency department. Each chapter is dedicated to a specific joint (or joints) and includes the basics of a high-yield physical examination including inspection, palpation, range of motion, special tests, as well as neurovascular and skin exams. Corresponding figures of essential anatomy, pictures of physical exam maneuvers, and clinical correlations are also featured. Emergent and common musculoskeletal conditions for each joint(s) are discussed, as well as the appropriate emergency department management for each condition. Additional chapter topics include sports concussions, sports cardiology, heat illness, and common splints used in the emergency department.

ADDITIONAL INFORMATION

Level: specialist medical trainees, medical specialists/consultants
Clinical case studies have long been recognized as a useful adjunct to problem-based learning and continuing professional development. They emphasize the need for clinical reasoning, integrative thinking, problem-solving, communication, teamwork and self-directed learning – all desirable generic skills for health care professionals. This book is a teaching tool that bridges the gap between textbook information and everyday experience of clinicians ‘in the trenches’. Leading practitioners bring a practical approach to these complex conditions, highlighting specific areas of diagnostic uncertainty in evaluation and treatment. Each case is taken from real-world clinical practice and reviews the diagnostic and treatment process in a systematic manner, identifying common challenges and potential pitfalls. This concise and useful guide in the Common Pitfalls series provides a step-by-step guide for everyday clinical practice, invaluable to anyone dealing with cerebrovascular disease on a front-line basis. The intended readership is trainees and non-specialist practitioners in neurology, stroke medicine, and neurosurgery.

HODGES’ FRONTOTEMPORAL DEMENTIA
Second edition
Edited by Bradford C. Dickerson
Department of Neurology, Massachusetts General Hospital, Boston

Frontotemporal dementia (FTD) is a cruel disease, robbing patients of core human characteristics and wreaking havoc with relationships. Clinical and scientific interest in FTD and related disorders continues to grow rapidly, with major advances having occurred since this book’s last publication. New clinical diagnostic criteria were published in 2011; new pathological discoveries have led to new diagnostic criteria; and major genetic discoveries have been made. This new edition covers these developments, providing the leading resource on FTD, PPA, PSP, CBD, FTD-ALS, and related disorders, now written by a more internationally representative group of authors than before. Providing an in-depth and expert synthesis of the status of our knowledge of FTD and related syndromes, the content includes chapters reviewing clinical, neuropsychiatric, neuropsychological, imaging, and other features of FTD and multidisciplinary approaches to patient management. Essential reading for specialist and generalist neurologists, psychiatrists, geriatricians, neuropsychologists, neuropathologists, and basic scientists in relevant fields.

CONTENTS

ADDITIONAL INFORMATION
Level: medical specialists/consultants

WHY IT WILL SELL
• Describes numerous scientific advances in FTD research from the past decade, assisting clinicians in developing an up-to-date framework for treating patients
• Offers a resource for understanding clinical as well as pathological and genetic features of frontotemporal dementia syndromes and related diseases, covering the most up-to-date clinical diagnostic and pathological criteria, and recent genetic discoveries
• Provides practical suggestions on treatment, management, and resources to assist in the development of care plans

NEUROLOGY

DEEP BRAIN STIMULATION MANAGEMENT
Second edition

Edited by William J. Marks
University of California, San Francisco

This concise guide to deep brain stimulation (DBS) outlines a practical approach to the use of this paradigm-shifting therapy for neurologic and psychiatric disorders. Fully revised throughout, the new edition provides extensive information about the application of DBS to movement disorders, and includes new chapters on DBS to treat epilepsy and psychiatric conditions. With the evolution of surgical techniques for DBS lead implantation, a brand new section focused on interventional MRI approaches is also included. All key aspects of DBS practice are covered, including patient selection, device programming to achieve optimal symptom control, long-term management, and troubleshooting. It is a guide to be kept in the clinic and consulted in the course of managing patients being considered for, or treated with, DBS. With contributions from some of the most experienced clinical leaders in the field, this is a must-have reference guide for any clinician working with DBS patients.

CONTENTS

ADDITIONAL INFORMATION

MEDICATION-INDUCED MOVEMENT DISORDERS

Edited by Joseph H. Friedman
Department of Neurology, Brown University

Medications that may produce movement disorders are widely used. The resulting disorders are often highly disconcerting for the patient and their relatives, especially when the connection between medication and disorder is not recognized. However, ascribing an adverse drug effect to medication exposure is often difficult, especially when the side effect is rare. Covering various drugs – including the major classes of medications working primarily on the brain, specifically antipsychotics and antidepressants – this all-encompassing review of medication-induced movement disorders aids early recognition and improved treatment. The problem of what to do when the offending medication cannot be reduced is also reviewed. It discusses the best options for evaluation and treatment, including medical imaging and deep brain stimulation, and guides the clinician in managing the disorder, making this a vital reference for medical specialists and consultants in neurology and neuropharmacology and any clinician seeing patients on medications crossing the blood-brain barrier.

COMMON EPILEPSY PITFALLS

Case-Based Learning

Dieter Schmidt
Epilepsy Research Group, Free University of Berlin

and Steven Schachter
Department of Neurology, Beth Israel Deaconess Medical Center, Boston

Epilepsy is amongst the most frequently encountered of neurological disorders, yet its diagnosis and management is fraught with pitfalls. Issues surrounding differential diagnosis, seizure type, underlying causes, EEG interpretations, treatment options and prognoses can often trip-up clinicians. Common Epilepsy Pitfalls: Case-Based Learning, is a comprehensive guide to anticipating and managing the pitfalls in the diagnosis and management of epilepsy. Real-life cases are presented along with pragmatic recommendations for courses of action that guide the reader through accurate and effective epilepsy diagnosis and treatment. Cases have been chosen to answer key questions such as: the first seizure – is it epilepsy? Which drug? When should stopping treatment be considered? What to do in an epileptic emergency? Containing detailed coverage of psychiatric, social and family issues – and authored by world experts in epilepsy management – this text is invaluable for neurologists, internists, family practitioners and advanced medical students.

CONTENTS

ADDITIONAL INFORMATION

Level: medical specialists/consultants, specialist medical trainees

WHY IT WILL SELL

• Case-based approach to learning – experienced authors highlight ‘pitfalls’ in diagnosis and management of epilepsy
• Questions addressed to the reader – maintains interest and heightens the real-life feel of the book
• Well-illustrated – will help clinicians detect and identify characteristic problems in epilepsy management
• Each case will stand alone as a complete story so that the book can be read either as a whole, or ‘dipped into’

ESSENTIAL NEUROPHARMACOLOGY

The Prescriber's Guide

Second edition

Stephen D. Silberstein
Thomas Jefferson University, Philadelphia

Michael J. Marmura
Thomas Jefferson University, Philadelphia

and Hsiangkuo Yuan
Thomas Jefferson University, Philadelphia

Consultant Editor Stephen M. Stahl
University of California, San Diego

Essential Neuropharmacology: The Prescriber's Guide reviews the full range of medications used by neurologists in clinical practice. Expert knowledge is given about the best use of medications in patient care. Each drug listing contains the full range of indications, their advantages and disadvantages, and tips for dosing and avoiding adverse effects. Evidence is taken from recent clinical trials, which helps the reader relate the drug descriptions to everyday clinical practice. Where appropriate, off-label uses are also described. The detailed descriptions of each medication enable the user to make quick and informed decisions with the confidence they need to serve the clinical needs of their patients effectively. The new edition is fully updated throughout. Major new additions include neuro-oncology drugs, new multiple sclerosis agents, sleep medications and new formulations. This book is an essential, user-friendly reference suitable for neurologists at all stages of their careers.

WHY IT WILL SELL

• Provides the most complete and up-to-date summary of the practical use of neurologic drugs – ensures currency

• Uniform format and design – allows readers quickly to access relevant information in a clinical setting

• Expanded to include new drugs and formulations, including neuro-oncology drugs, new multiple sclerosis agents, medications used for sleep – comprehensive for modern neurologic practice

COMPREHENSIVE MANAGEMENT OF ARTERIOVENOUS MALFORMATIONS OF THE BRAIN AND SPINE

Edited by Robert F. Spetzler
Barrow Neurological Institute, Phoenix, Arizona

Randall T. Higashida
University of California, San Francisco, Arizona

Douglas S. Kondziolka
NYU Langone Medical Center

and M. Yashar S. Kalani
Barrow Neurological Institute, Phoenix, Arizona

Vascular malformations of the brain and spine pose many management challenges. This text provides a comprehensive, state-of-the-art review of the natural history, treatment options, and outcomes of patients with these conditions. Despite their relative rarity, these lesions are responsible for devastating injury to individuals and can cause an enduring physical, psychological, and economic burden on patients and families. Many new therapeutic options are now available with the advent of novel surgical, endovascular, and radiosurgical techniques. The basic sciences have fuelled development of small molecule and biologic therapies targeting the molecular basis of disease. Authored by international experts in the fields of neurosurgery, neurology, radiology, and radiation oncology, this book provides state-of-the-art treatment plans and discussions of ideal therapy. This text is aimed at practitioners in the fields of neurology, neurosurgery, neuroradiology, radiation oncology, rehabilitation medicine and allied fields who care for patients with brain and spinal vascular malformations.

January 2015
276 x 219 mm  409pp
320 b/w illus.  106 colour illus.  37 tables
978-1-107-03388-7  Hardback
£125.00

WHY IT WILL SELL

• Includes comprehensive treatment plans and discussions (surgery, endovascular and radiation treatment options) for arteriovenous malformations of the brain and spine

• Written by a group of international experts in fields of neurosurgery, radiology, and radiation oncology

• Richly illustrated with diagnostic images and illustrations of key procedures – a key learning tool for practitioners at all career stages

CONTENTS

Preface; Part I. Development, Anatomy, and Physiology of Arteriovenous Malformations of the Central Nervous System; Part II. Evaluation and Treatment Considerations for Arteriovenous Malformations; Part III. Surgical Approaches to the Treatment of Arteriovenous Malformations; Part IV. Medical, Endovascular, and Radiosurgical Treatment of Arteriovenous Malformations; Index.

EMERGENCY NEURORADIOLOGY
A Case-Based Approach

Edited by Yang Tang
Virginia Commonwealth University

Sugoto Mukherjee
University of Virginia

and Max Wintermark
Stanford University School of Medicine, California

Neuroradiological emergencies pose important challenges to the on-call physician, demanding thorough preparedness and quick action. This concise, highly illustrated volume covers all facets of emergency neuroradiology in a clear, easily searchable way, making it ideal both for effective learning and for rapid reference. Over 150 cases, accompanied by nearly 800 high-quality CT and MRI images, guide the reader through both common and uncommon presentations in all three key areas: brain, head and neck, and spine. Each case consists of a short history, images, diagnosis, differential diagnosis, key points in bullet form, and suggested readings. The cases are organized into thematic chapters to provide a structured approach for primary learning, but every case remains independent and fully searchable for guidance when on call. With its practically focused approach, this book is a must for radiology residents, fellows and practicing radiologists, and will also benefit specialists in neurology, neurosurgery and emergency medicine.

CONTENTS

ADDITIONAL INFORMATION
Level: specialist medical trainees, medical specialists/consultants

WHY IT WILL SELL
• Bullet-point case format allows quick reference and fast learning
• Supplements larger, more broadly focused textbooks by providing easily digestible specialist information
• Comprehensive images for each case show exactly what to expect when making diagnoses in a real-world setting
RIGHTS COME TO MIND

Brain Injury, Ethics, and the Struggle for Consciousness

Joseph J. Fins
Cornell University, New York

Through the sobering story of Maggie Worthen and her mother, Nancy, this book tells of one family’s struggle with severe brain injury and how developments in neuroscience call for a reconsideration of what society owes patients at the edge of consciousness. Drawing upon over fifty in-depth family interviews, the history of severe brain injury from Quinlan to Schiavo, and his participation in landmark clinical trials, such as the first use of deep brain stimulation in the minimally conscious state, Joseph J. Fins captures the paradox of medical and societal neglect even as advances in neuroscience suggest new ways to mend the broken brain. Responding to the dire care provided to these marginalized patients, after heroically being saved, Fins places society’s obligations to patients with severe injury within the historical legacy of the civil and disability rights movements, offering a stirring synthesis of public policy and physician advocacy.
Information technology is transforming the practices of medicine, nursing, and biomedical research. Computers can now render diagnoses and prognoses more accurately than humans. The concepts of privacy and confidentiality are evolving as data moves from paper to silicon to clouds. Big data promises financial wealth, as well as riches of information and benefits to science and public health. Online access and mobile apps provide patients with an unprecedented connection to their health and health records. This transformation is as unsettling as it is exhilarating. This unique new book is essential for anyone who uses computers in health care, biomedical research or public health, and cares about the ethical issues that arise in their work. With chapters spanning issues from professionalism and quality to mobile health and bioinformatics, it establishes what will become the ‘core curriculum’ in ethics and health informatics, a growing field which encourages truly inter- and multidisciplinary inquiry.

COMMUNICATING QUALITY AND SAFETY IN HEALTH CARE

Rick Iedema
University of Technology, Sydney

Donella Piper
University of New England, Australia

and Marie Manidis
University of Technology, Sydney

In response to the growing emphasis on clinicians’ capacity to practise effective communication, *Communicating Quality and Safety in Health Care* provides real-time communication scenarios and interprofessional case studies. The book engages healthcare trainees from across medicine, nursing and allied health services in a comprehensive and probing discussion of the communication demands that confront today’s healthcare teams. This book explains the role of communication in mental health, emergency medicine, intensive care and a wide range of other health service and community care contexts. It emphasises the ways in which patients and clinicians communicate, and how clinicians communicate with one another. The case studies explain why and how communication is critical to good care and healing. Each chapter analyses real-life practice situations, encourages the learner to ask probing questions about these situations and sets out the principal components and strategies of good communication.

BUILDING PROFESSIONAL NURSING COMMUNICATION

Jill Lawrence
University of Southern Queensland

Cheryl Perrin
University of Southern Queensland

and Eleanor Kiernan
University of Southern Queensland

Establishing and building effective relationships are essential skills for safe nursing practice. Building Professional Nursing Communication guides students through the concepts integral to successful communication for nurses. Each chapter addresses communication theory and clearly demonstrates how it can be applied both to university studies and to professional nursing practice. Learning is extended further through case studies, practical scenarios and student learning activities. The book also addresses recent developments in online learning, covering information literacy, digital learning and consultation, as well as emerging forms of digital communication such as e-portfolios, blogs and new media. This book brings together authors from nursing and communication backgrounds, combining extensive research and practical experience in both fields. This diverse team mirrors the interdisciplinary nature of the nursing role in the increasingly contemporary healthcare sector. Building Professional Nursing Communication is an essential resource for nursing students throughout their entire degree.

MRCOG PART ONE

Your Essential Revision Guide

Second edition

Edited by Alison Fiander
Cardiff University

and Baskaran Thilaganathan
St George’s University London

Fully updated to reflect changes to the curriculum and question format since publication of the original edition, this book is essential reading for all Part 1 MRCOG candidates. A chapter has been added to mirror the new curriculum domain of data interpretation. Edited by experienced RCOG examiners and written by contributors to the RCOG’s revision course, this comprehensive textbook provides extensive coverage of all curriculum areas covered by the Part 1 examination (the basic sciences which are vital to the clinical practice of obstetrics and gynaecology). Fully illustrated in colour throughout to aid understanding, this is the one textbook that every Part 1 candidate should own. The content is complementary to RCOG’s eLearning programme StratOG (http://www.rcog.org.uk/stratog) which offers a range of products to support training and professional development in obstetrics and gynaecology, including banks of Single Best Answer (SBA) questions that offer candidates invaluable practice at tackling this demanding examination.

- Fully updated to reflect the new curriculum and question format
- Includes a new chapter on the new curriculum domain of data interpretation
- Fully illustrated in colour throughout to aid understanding – featuring newly commissioned anatomy drawings

why it will sell
ANDROGENS IN GYNECOLOGICAL PRACTICE

Edited by Leo Plouffe, Jr
Bayer Healthcare, Wayne, New Jersey
and Botros R. M. B. Rizk
Department of Obstetrics and Gynecology, University of South Alabama

A practical approach to the field of androgen excess or deprivation in women’s health. The content includes multiple viewpoints on the most common disorders in this class, such as polycystic ovary disease, hirsutism and menopausal issues. Each chapter provides a combination of long-lasting clinical principles in the diagnosis and management of these patients along with a state-of-the-art review. This text takes an innovative approach to uncommon conditions (such as congenital adrenal hyperplasia, transgender conditions). In addition to presenting clinical insights, and a review of the basic science underpinning these conditions, it focuses on key concepts that can be derived from these rare conditions to the entire field. This book is an essential addition to the library for any busy clinician who is looking for a practical reference guide but also for the sub-specialist who is looking for new and thought-provoking insights in this complex scientific area.

CONTENTS

WHY IT WILL SELL
• A comprehensive review providing rapid access to a broad range of key concepts on the role of androgens in women’s health
• An innovative approach to androgen deprivation and excess states in women’s health provides a broad range of insights from a wide range of specialties beyond traditional gynecology and reproductive endocrinology
• Covers both common and rare conditions of androgen excess in women

MANAGING THE MENOPAUSE

21st Century Solutions

Edited by Nick Panay
Queen Charlotte’s Hospital, London

Paula Briggs
Sefton Community Sexual Health Service, Liverpool

and Gab Kovacs
Monash University, Victoria

Since the Women’s Health Initiative report of 2002, there has been reluctance to provide women with hormone replacement therapy due to a lack of clarity about the potential risks. This book reviews all aspects of the menopause and places the benefits and risks of hormone therapy into perspective. It fully informs the reader regarding the evidence base of all aspects of menopause medicine and can be used either as a reference book to solve specific problems, or as a book to be read cover-to-cover. It will provide the reader with the latest information and as a result encourage confidence in managing menopause related problems. This practical, evidence-based guide is suitable for all health professionals managing the menopause including gynaecologists, sexual and reproductive medicine specialists, general practitioners and trainees in any of the above specialties.

CONTENTS

ADDITIONAL INFORMATION

Level: medical specialists/consultants
Clinical research has produced a continuous stream of evidence-based guidelines to guide practice in gynaecology. The guidelines are often widely scattered: this book brings together the essential guidelines in one comprehensive resource. The primary focus is on Royal College of Obstetricians and Gynaecologists and other UK national guidelines; however, many chapters contain a ‘Guideline Comparator’ box carrying information from important international guidelines. Where there are no UK guidelines, information based on international guidelines is provided; where any guidelines do not exist, available evidence and accepted norms of practice based on expert opinion are detailed. Several chapters also contain a ‘what not to do’ box, which should act as a source of rich debate. To assist those studying for postgraduate examinations – such as MRCOG – the information is presented in schematic flowcharts, representing a step-by-step method of approaching clinical problems and providing an easy-to-use learning resource.

Preface; List of abbreviations; Part I. Early Pregnancy Care; Part II. Disorders of Menstruation; Part III. Reproductive Medicine; Part IV. Subfertility; Part V. Urogynaecology, Pelvic Floor Problems and HRT; Part VI. Gynaecological Oncology; Part VII. Sexual and Reproductive Health, STI and Vaginal Infection; Part VIII. Contraception; Index.

**CONTENTS**
PROACTIVE SUPPORT OF LABOR

The Challenge of Normal Childbirth

Second edition

Paul Reuwer
Department of Obstetrics, St Elisabeth Hospital, Tilburg

Hein Bruinse
Department of Obstetrics and Gynecology, Utrecht University Medical Center

and Arie Franx
Department of Obstetrics, St Elisabeth Hospital, Tilburg

The right for every woman to have a ‘natural’ birth has been recognized for many years, yet surgical interventions continue to rise and, paradoxically, complaints and the degree of litigation for disappointing labor outcomes escalate. Proactive Support of Labor enhances professional skills by providing the expertise for preventing long labors – the root-cause of traumatic birth experiences and the cesarean pandemic. Step-by-step, evidence-based guidance on expert care and support during labor is given. Emphasis is placed on pre-labor education, personal attention, and well-defined birth planning – including strict diagnoses and timely corrective measures in abnormal labor – and constant audit of all procedures and outcomes. Striking a new balance between natural birth and intervention, and invariably enhancing women’s satisfaction with the childbirth experience, the fully updated revision of this groundbreaking work will be essential reading for obstetricians, midwives, nurses, and trainees. For peer and reader reviews of the first edition see: www.proactivesupportoflabor.com.

WHY IT WILL SELL

- A deeply researched analysis of the ills and challenges of current obstetrics and midwifery, debunking fallacies from the misapplication of EBM – an eye-opener for many birth professionals and pregnant women
- An in-depth reinterpretation of the basic biophysics dominating the natural process of birth – reevaluates the basic science of parturition, reinstating real, evidence-based practice
- A step-by-step exposition of all medical and non-medical components of a safe, simple, and high-quality childbirth system, supported by the best possible clinical evidence – introduces a safe, simple, and high quality birth-plan, universally applicable; promotes a spontaneous, safe and rewarding labor and delivery; and greatly improves women’s satisfaction with the childbirth experience

Surgical practice has changed enormously since the first edition of Surgical Critical Care Vivas, as shown by the introduction of the MRCS Part B OSCE. This landmark book has been fully updated to reflect the latest NICE and SIGN guidelines and common ALS principles in critical care patients, as well as current ATLS® and CCrISP® guidelines (such as CT scanning in trauma). The alphabetical format of the previous edition is replaced by an ABCDE chapter format, incorporating an escalating level of diagnostic and management complexity in conjunction with a concise mini-bibliography in each chapter, enabling the reader to rapidly access the required information. Covering both non-ICU-based patients and basic fundamentals of ICU care, the chapters introduce standard definitions, pathological processes and diagnostic features, before discussing common investigations and suggested management plans. A must-have revision guide for all surgical trainees, from final year medical students through to junior surgical registrars.

CONTENTS

Acknowledgments; List of abbreviations; Ward Care (Levels 0–2); Part I. Airway; Part II. Breathing; Part III. Circulation; Part IV. Disability (Neurological Evaluation); Part V. Exposure (Everything Else); Part VI. Intensive Care Unit; Index.

CARE OF THE PERSON WITH DEMENTIA

Interprofessional Practice and Education

Dawn Forman
Curtin University, Perth

and Dimity Pond
University of Newcastle, New South Wales

Care of the Person with Dementia responds to the urgent need for health practitioners to take an innovative approach to the challenge of dementia. The first Australian text of its kind, it combines evidence-based resources with interprofessional education and practice. It explores the ethical, social and environmental repercussions of dementia to provide a comprehensive overview of dementia care in an Australian context. The text is structured around a model of interprofessional education and practice (IPE) tailored to dementia care. This model incorporates the context of care, an important element missing from other recognised models of IPE. Throughout the book, the principles of IPE are explained within the context of dementia, drawing on exemplars from a body of current, well-researched and evaluated dementia practice. Written by experienced academics, and providing national and international perspectives, this is a unique and crucial resource to develop collaborative skills and professional knowledge in the management of dementia.

PRACTICAL CLINICAL ONCOLOGY
Second edition
Edited by Louise Hanna
Velindre Cancer Centre, Velindre Hospital, Cardiff
Tom Crosby
Velindre Cancer Centre, Velindre Hospital, Cardiff
and Fergus Macbeth
Velindre Cancer Centre, Velindre Hospital, Cardiff

Practical Clinical Oncology, 2nd edition, provides a practical and comprehensive review of the current management of common types of cancer. Introductory chapters give background information on the main treatment modalities and other key issues such as acute oncology, palliative care and clinical research, with new chapters on pathology and advanced external beam radiotherapy. Subsequent chapters describe the diagnosis and treatment of malignancies, based on tumour site or type. Finally, multiple choice questions allow the reader to test their knowledge. This edition has been fully updated to reflect the most current developments in radiotherapy, tumour biology and drug therapy. With an emphasis on practical aspects of cancer care that will be relevant to day-to-day decision making, this book is an invaluable resource on contemporary clinical management of the cancer patient for all trainees and practitioners involved in clinical oncology, medical oncology and palliative care, as well as for specialist nurses and radiographers.

CONTENTS

ADDITIONAL INFORMATION
Level: specialist medical trainees, medical specialists/consultants

WHY IT WILL SELL
• Many chapters contain a section on areas of current interest relevant to the chapter topic, which gives the reader information on the most recent developments in this rapidly changing field
• Consistent chapter format makes it simple for readers to assimilate information quickly and easily
• An introductory section on generic topics followed by chapters divided into tumour site and type means it is easy to navigate and locate specific information quickly, making it an ideal book for trainees preparing for examination or for practical use in a clinical setting
• Brand new chapters on advanced radiotherapy techniques and pathology

MOLECULAR PATHOLOGY

A Practical Guide for the Surgical Pathologist and Cytopathologist

Edited by John M. S. Bartlett
Ontario Institute for Cancer Research, Toronto

Abeer Shaaban
University Hospitals Birmingham NHS Foundation Trust

and Fernando Schmitt
Laboratoire National de Sante, Luxembourg

This practical manual provides a comprehensive yet concise guide to state-of-the-art molecular techniques and their applications. It starts with an overview of the essential principles of molecular techniques, followed by separate chapters detailing the use of these techniques in particular tissues and organs, and describing recommended treatment plans. Each chapter covers the tests available, their advantages, limitations, and use as diagnostic and prognostic tools, with key learning points at the end of each topic. Using both histologic and cytologic samples, it discusses how to interpret test results in a pathologic context and enables trainees and practising pathologists to gain an in-depth understanding of molecular diagnostic techniques and how to incorporate them into routine diagnostic practice. Aiding the daily practice of refining diagnosis, as well as offering a didactic approach, this book is an essential reference for practising pathologists and cytopathologists as well as trainees in pathology.

PATHOLOGY

PANCREATIC CYTOHISTOLOGY

Barbara Ann Centeno
University of South Florida College of Medicine

Edward B. Stelow
University of Virginia

and Martha Bishop Pitman
Harvard Medical School

Each volume in this richly illustrated series, sponsored by the Papanicolaou Society of Cytopathology, provides an organ-based approach to the cytologic and histologic diagnosis of small tissue samples including fine-needle aspiration biopsy, cell block samples and core, pinch and forceps biopsies. This volume provides a practical approach to preparing and assessing pancreatic aspiration, core biopsy and brushing samples. Benign, premalignant and malignant entities are presented in a well-organized and standardized format supported with high-resolution color photomicrographs, tables, tabulated specific morphologic criteria and appropriate ancillary testing algorithms. Example vignettes allow the reader to assimilate the diagnostic principles in a case-based format. This unique series strengthens the bridge between surgical pathology and cytopathology, providing the pathologist with the ability to diagnose small tissue samples with confidence. The CD-ROM packaged with the printed book contains all the images in a downloadable format, making this a valuable resource for practicing and trainee pathologists.

PEARLS AND PITFALLS IN NEOPLASTIC DERMATOPATHOLOGY

Edited by Ophelia Dadzie
University College London

and Meera Mahalingam
Boston University School of Medicine, Boston, Massachusetts

This practical book takes the challenge of the dermatopathology sign-out and walks the reader through a diagnostic approach, explaining how to distinguish between benign and malignant lesions and identifying histopathologic features unique to each entity. Through discussion of some 150-200 lineage-unrelated cutaneous neoplastic disorders (primary and secondary), the reader will become familiar with common and sometimes uncommon but clinically relevant conditions. Each chapter adopts a consistent style for quick and easy reading, covering typical microscopic features, clinical vignettes, histological variations, diagnostic pitfalls and differentials, and key diagnostic pearls. Chapters also explain general pathological principles, laboratory processing of specimens and medico-legal aspects of neoplastic dermatopathology. Each copy of the book is packaged with a password, providing online access to all text and images. Written by leading pathologists and educators, this is an essential resource for trainees and more experienced pathologists tackling the daily sign-out as well as board exams in dermatopathology.

WHY IT WILL SELL

- Provides histopathologic clues to a spectrum of lineage-unrelated tumors, as well as diagnostic pitfalls, enabling the reader to identify histopathologic features that define a specific neoplasm
- Discusses a general approach to the diagnosis of cutaneous neoplasms, providing the reader with broad principles that can be applied in different settings
- Consistent chapter structure and bulleted text allows the reader to gain a comprehensive overview quickly and easily
